Energy The New Era:

The Highway Engineer's Guide to Alternative Energy Sources and Applications Marian F. Eilers, John Laughland, 1980 A highway engineer considering an alternative energy source for an upcoming project probably does not have a background in heating ventilation and air conditioning or electrical engineering but with overall responsibility for the project needs to determine quickly whether or not an alternative energy source is cost effective If it is cost effective he would then need to know the design process and terminology to supervise the designer s work The guide meets these needs and in addition offers a selected bibliography of published information a listing of persons with experience in this area and a selection of actual case studies of highway agencies that have used alternative energy sources successfully

The Energy of Nations Jeremy Leggett, 2013-10-08 Systemic global risks of oil supply climate shock and financial collapse threaten tomorrow s economies and mean businesses and policy makers face huge challenges in fuelling tomorrow s world Jeremy Leggett gives a personal testimony of the dangers often ignored and incompletely understood a journey through the human mind the institutionalization of denial and the reasons civilizations fail It is also an account of tantalizing hope because mobilizing renewables and redeploying energy funding can soften the crash of modern capitalism and set us on a road to renaissance

Energy Capitals Joseph A. Pratt, Martin V. Melosi, Kathleen A. Brosnan, 2015-03-23 Fossil fuels propelled industries and nations into the modern age and continue to powerfully influence economies and politics today As *Energy Capitals* demonstrates the discovery and exploitation of fossil fuels has proven to be a mixed blessing in many of the cities and regions where it has occurred With case studies from the United States Canada Mexico Norway Africa and Australia this volume views a range of older and more recent energy capitals contrasts their evolutions and explores why some capitals were able to influence global trends in energy production and distribution while others failed to control even their own destinies Chapters show how local and national politics social structures technological advantages education systems capital infrastructure labor force supply and demand and other factors have affected the ability of a region to develop and control its own fossil fuel reserves The contributors also view the environmental impact of energy industries and demonstrate how in the depletion of reserves or a shift to new energy sources regions have or have not been able to recover economically The cities of Tampico Mexico and Port Gentil Gabon have seen their oil deposits exploited by international companies with little or nothing to show in return and at a high cost environmentally At the opposite extreme Houston Texas has witnessed great economic gain from its oil natural gas and petrochemical industries Its growth however has been tempered by the immense strain on infrastructure and the human transformation of the natural environment In another scenario Perth Australia Calgary Alberta and Stavanger Norway have benefitted as the closest established cities with administrative and financial assets for energy production that was developed hundreds of miles away Whether coal oil or natural gas the essays offer important lessons learned over time and future considerations for the best ways to capture the benefits of energy
