When one thinks of hazardous waste, images of 55-gallon drums labeled with skull and crossbones and massive factories spewing neon-green sludge probably come to mind. In truth, hazardous wastes take on a variety of guises, sometimes as the mercury in old CRT computer monitors, or lead paint in old demolished buildings, or as vinyl chloride leftover from industrial processes. Hazardous waste can be generated from numerous processes and facilities including construction sites, hospitals, factories, military bases and discarded electronics. In theory, if a material has been discarded and it can cause substantial harm to humans or the environment, it can be considered a hazardous waste.

1.1 The Environmental Protection Agency's Regulatory Definition

According to the [US Environmental Protection Agency \(2009\)](#), waste is hazardous if it poses a substantial threat to human health or the environment. While this definition suffices in a looser, philosophical sense, the words are not specific enough
