Engineered Porosity for Microphotonics and Plasmonics: Volume 797 Ralf Wehrspohn, 2004-03-18 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners *Materials Research Society Symposium Proceedings. Volume 797. Held in Boston, Massachusetts, December 2-4 2003. Engineered Porosity for Microphotonics and Plasmonics*, 2004 Symposium W Engineered Porosity for Microphotonics and Plasmonics held December 2 A at the 2003 MRS Fall Meeting in Boston Massachusetts combined the areas of optical nanoparticles microphotonics photonics crystals and the emerging field of plasmonics The program started with a review and recent advances in the understandings of porous silicon the famous light emitting silicon sponge which caused a real hype in the beginning of the YOs New results and first devices in the area of photonic crystals have been presented and caused very stimulating discussions The understanding of the photonic crystal properties also resulted in new insight in the classical area of ridge waveguides and new designs were proposed Finally the emerging field of plasmonics caused a lot of attraction and will possibly lead in the future to further exciting and well attended workshops This volume represents 50% of the presentations and gives a very good overview of the symposium Financial support by the AFOSR is gratefully acknowledged The editors would also like to thank all of the invited speakers for their excellent presentations the participants for their contributions and questions and the referees for their work Nanoengineered Assemblies and Advanced Micro/Nanosystems: Volume 820 Materials Research Society. 2004 - Materials, Processing and Devices: Volume 815 Michael Dudley, Perena Gouma, Tsunenobu Kimoto, Philip G.

Neudeck, Stephen E. Sadow, 2004-08-24 Silicon carbide SiC is a wide bandgap semiconductor that can operate at temperatures well above 300 C where silicon cannot perform In addition due to a high thermal conductivity equal to copper at room temperature SiC is an ideal candidate for operation in harsh environments and at high power levels Rapid advances in SiC materials and devices have recently resulted in implementation of SiC based electronic systems and the impact of these devices is expected to significantly increase in the next several years This book documents the most recent results on growth of bulk and epitaxial layers physical and structural properties process technology and device development obtained since the 10th International Conference on Silicon Carbide and Related Materials 2003 ICSCRM2003 held in Lyon France Extended defects in silicon carbide are highlighted The nature of defects induced by forward biasing of bipolar devices as well as methods to suppress the degradation are addressed **Advances in Chemical-Mechanical Polishing: Volume**

Silicon Science and Technology 2004: Volume 808 Materials Research Society. Meeting, 2004-09-03 This book celebrates 20 years of MRS symposia on the topic of amorphous silicon Contributors showed that the simplified theories developed to explain the limited experimental information available in the early eighties have spurred more sophisticated experimentation either refining the early understanding or making it irrelevant The differences of opinion that continue to exist and emerge are probably the hallmark of the amazing vitality of this field Applications range from mature thin film transistors solar cells and image sensors to the emerging possibility of erbium doped nanocrystalline silicon based materials for lasers and amorphous silicon quantum dots for luminescent devices The book discusses material characterization growth processes and devices Each chapter is further subdivided into sections that group papers around common themes Topics include nanomaterials electronic structure metastable effects understanding of growth processes laser induced crystallization metal induced crystallization other growth techniques newer devices solar cells and thin film transistors

Nanoparticles and Nanowire Building Blocks - Synthesis, Processing, Characterization and Theory: Volume 818 Materials Research Society. Meeting, 2004-10-29 Increasingly novel optical and magnetic properties of nanoparticles and

nanowires are finding rich opportunities in electronic biological tagging separation and sensing This volume brings together a large and diverse group of international researchers to focus on the synthesis processing characterization and modeling of nanoparticles and nanowires and their potential use as nanoscale building blocks for electronic optical and biological applications The compilation of papers reflects the drive to harness the understanding of isolated nanostructures translating these insights into opportunities of engineered materials and devices In addition to studies of individual nanostructures the volume also explores how new collective properties emerge as nanoscale building blocks are assembled to produce extended structures Experimental theoretical and computational perspectives are offered Topics include magnetic nanostructures metallic nanoparticles metallic nanowires magnetic and metallic nanostructures semiconductor quantum dots semiconductor dots and wires nanobiological materials and group IV nanoparticles
