Stochastic Global Optimization: Techniques And Applications In Chemical Engineering (With Cd-rom) Gade Pandu Rangaiah, 2010-06-04 Optimization has played a key role in the design planning and operation of chemical and related processes for several decades Global optimization has been receiving considerable attention in the past two decades Of the two types of techniques for global optimization stochastic global optimization is applicable to any type of problems having non differentiable functions discrete variables and or continuous variables It thus shows significant promise and potential for process optimization So far there are no books focusing on stochastic global optimization and its applications in chemical engineering Stochastic Global Optimization a monograph with contributions by leading researchers in the area bridges the gap in this subject with the aim of highlighting and popularizing stochastic global optimization techniques for chemical engineering applications The book with 19 chapters in all is broadly categorized into

two sections that extensively cover the techniques and the chemical engineering applications

Computational Electromagnetics Carsten Carstensen, Stefan Funken, Wolfgang Hackbusch, Ronald W. Hoppe, Peter Monk, 2012-12-06 The dimmed outlines of phenomenal things all into one another unless we put on the merge focusing glass of theory and screw it up some times to one pitch of definition and sometimes to another so as to see down into different depths through the great millstone of the world James Clerk Maxwell 1831 1879 For a long time after the foundation of the modern theory of electromagnetism by James Clerk Maxwell in the 19th century the mathematical approach to electromagnetic field problems was for a long time dominated by the analytical investigation of Maxwell's equations The rapid development of computing facilities during the last century has then necessitated appropriate numerical methods and algorithmic tools for the simulation of electromagnetic phenomena During the last few decades a new research area Computational Electromagnetics has emerged comprising the mathematical analysis design implementation and application of numerical schemes to simulate all kinds of relevant electromagnetic processes This area is still rapidly evolving with a wide spectrum of challenging issues featuring among others such problems as the proper choice of spatial discretizations finite differences finite elements finite volumes boundary elements fast solvers for the discretized equations multilevel techniques domain decomposition methods multipole panel clustering and multiscale aspects in microelectronics and micromagnetics

Thermal Processing of Foods K. P. Sandeep, 2011-05-12 The food

industry has utilized automated control systems for over a quarter of a century. However, the past decade has seen an increase in the use of more sophisticated software driven on line control systems especially in thermal processing unit operations. As these software driven control systems have become more complex, the need to validate their operation has become more important. In addition to validating new control systems, some food companies have undertaken the more difficult task of validating legacy control systems that have been operating for a number of years on retorts or aseptic systems. *Thermal Processing Control and Automation* presents an overview of various facets of thermal processing and packaging from industry, academic and government representatives. The book contains information that will be valuable not only to a person interested in understanding the fundamental aspects of thermal processing eg graduate students but also to those involved in designing the processes eg process specialists based in food manufacturing and those who are involved in process filing with USDA or FDA. The book focuses on technical aspects both from a thermal processing standpoint and from an automation and process control standpoint. Coverage includes established technologies such as retorting as well as emerging technologies such as continuous flow microwave processing. The book addresses both the theoretical and applied aspects of thermal processing concluding with speculations on future trends and directions.

Electromagnetics in a Complex World Innocenzo Pinto, Vincenzo Galdi, Leopold B. Felsen, 2012-12-06 This monograph contains the ceremonials and the Proceedings pertaining to the Workshop/Minisymposium on Electromagnetics in a Complex World: Challenges and Perspectives convened at the University of Sannio, Benevento, Italy from February 20-21, 2003 in connection with the bestowal of an honorary Laurea degree on Professor Leopold B. Felsen. The symposium was co-organized by Professors Innocenzo M. Pinto and Vincenzo Galdi in consultation with Professor Felsen. The University of Sannio is a recently installed, fast growing university enrolling about 6,500 undergraduate and graduate students in its various programs: Law, Economics, Engineering, Sciences. The College of Engineering presently comprises 50 faculty members and about 1,500 students. The degree bestowal ceremony took place in the morning of February 20, 2003 and is documented in English in its entirety here in Part VI of these Proceedings. Because of the international character of this two-day event, the program booklet provided for attendees of the degree award ceremony was printed in Italian and English. After a brief greeting by Prof. Aniello Cimitile, the President of the University of Sannio, Professor Pinto, who had originally proposed Prof. Felsen's nomination, delivered in Italian a detailed *Laudatio*, a laudatory discourse on the nominee's accomplishments and personality. This was followed by the nominee's *Lectio*, a retrospective covering his professional life as well as his social and cultural background, presented in English in a mixed style laced with humor and comprising prose, verses, visuals and photographs.
