## Main Page

Technical reports include various types of "technical" information. For example, if you need to report why a design or piece of equipment failed, you'd write a forensic report. Or, you might have to write about a design you created. Then, you'd produce a design report or, you may need to combine these two. Many report types are classified as technical reports. You should always determine what information you need to convey and who your audience is before you start writing.

Technical reports present facts and conclusions about your designs and other projects. Typically, a technical report includes research about technical concepts as well as graphical depictions of designs and data. A technical report also follows a strict organization. This way, when other engineers read what you write, they can quickly locate the information that interests them the most.

## Audience

As a student, you might assume that your technical report's audience is your instructor, however, this may not always be the case. Your instructor may ask you to produce a report for your peers or for other engineers. However, you shouldn't always assume that your audience has a strong engineering background or is familiar with the engineering terminology you use. Always check with your instructor to know who your audience is.

As an engineer in the field, the most likely audience for the technical reports you produce is other engineers with a background similar to yours. This audience is more likely to understand the terminology you use. However, you should always evaluate who your readers will be before assuming they will understand your jargon. Consider how your readers will use your report. For instance, you might submit a technical report to a publication or your technical report may present a specific design. The audiences in each situation have different needs. Audiences may read the publication for information and insight while audiences reading about your specific design may critique your design or make decisions based on its content.

## General Format

Technical Reports have an organized format because a majority of your audience may not read the entire report in one reading. This specific format allows readers to quickly locate the information they need.

Most technical reports include the parts listed below. However, you may be required to include or exclude specific sections. Be sure to check with your instructor before using the format outlined here.

*ENGINEERING STUDENTS AND THE APPLICATION OF SCIENCE* Dr. Rajeev Kumar Chauhan, Dr. Anand Prakash Singh, Dr. Anurag Dwivedi, Dr. Himanshu Sharma, Engineering has long been recognized as a driving force behind the world's most significant advancements bridging the realms of scientific discovery and real world application As we stand at the threshold of an era defined by unprecedented technological growth climate urgency global interconnectedness and shifting societal demands the role of engineers and more importantly engineering students has never been more crucial This book Engineering Students and the Application of Science was born out of a deep understanding that today's students are not merely future practitioners but pivotal contributors to the ongoing evolution of engineering as a discipline and as a catalyst for global change Throughout my academic journey and professional experience I observed a growing gap between the pure scientific principles taught in classrooms and their dynamic interdisciplinary real world applications The intent of this book is to address that gap by equipping students with both the foundational scientific knowledge and the contextual understanding necessary to innovate adapt and lead in the modern world This book is not just another academic text listing formulas theories or definitions it is a curated exploration of how science breathes life into engineering inspiring creativity solving real problems and fostering sustainable progress It acknowledges that engineering today requires more than technical expertise it demands critical thinking ethical responsibility collaboration across disciplines adaptability in the face of emerging technologies and a genuine commitment to societal well being With this perspective the book delves deeply into the multifaceted relationship between applied science and engineering practice showcasing how core scientific disciplines such
