The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education

National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine, 2018-07-21 In the United States broad study in an array of different disciplines arts humanities science mathematics engineering as well as an in depth study within a special area of interest have been defining characteristics of a higher education But over time in depth study in a major discipline has come to dominate the curricula at many institutions This evolution of the curriculum has been driven in part by increasing specialization in the academic disciplines There is little doubt that disciplinary specialization has helped produce many of the achievement of the past century Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise grappling with ever more specialized and fundamental problems Yet today many leaders scholars parents and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos These silos represent what many see as an artificial separation of academic disciplines This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time

The Integration of the Humanities and Arts with Sciences Engineering and Medicine in Higher Education examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science technology engineering mathematics and medicine STEM lead to improved educational and career outcomes for undergraduate and graduate students It explores evidence regarding the value of integrating more STEM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEM education programs

Unfinished Design Joseph Shackford Johnston, Susan Shaman, Robert Zemsky, 1988 The results of several studies of the humanities and social sciences in undergraduate engineering education are presented and discussed The first chapter explains the value of humanities and social sciences coursework and describes briefly some of the obstacles confronting efforts to improve it The second chapter summarizes the findings of two empirical studies one of engineering programs policies and one of engineering students choice of humanities and social science courses The third chapter briefly describes 13 programs or parts of programs that provide liberal education to engineering students in innovative ways With special attention given to the typical engineering school chapter four suggests criteria for improving humanities and social science coursework and steps to help create a climate and mechanisms to support that improvement Contains 30 references

MSE *Engineering, Social Sciences, and the Humanities* Steen Hyldgaard Christensen, Anders Buch, Eddie Conlon, Christelle Didier, Carl Mitcham, Mike Murphy, 2023-01-16 This book presents a critical examination of conversations

between engineering social sciences and the humanities asking whether their conversations have come of age These conversations are important because ultimately their outcome have real world consequences in engineering education and practice and for the social and material world we inhabit Taken together the 21 chapters provide scholarly argued responses to the following questions Why are these conversations important for engineering for social sciences and for the humanities Are there key places in practice in the curriculum and in institutions where these conversations can develop best What are the barriers to successful conversations What proposals can be made for deepening these conversations for the future How would we know that the conversations have come of age and who gets to decide The book appeals to scholarly audiences that come together through their work in engineering education and practice The chapters of the book probes and access the meetings and conversations and they explore new avenues for strengthening dialogues that transcend narrow disciplinary confines and divisions The volume offers a rich collection of descriptive resources and theoretical tools that will be useful for researchers of engineering practices and for those aiming to reshape the engineering lifeworld through new policies The book depicts the current state of the art of the most visible SSH contributions to shaping engineering practices as well as a map of research gaps and policy problems that still need to be explored Dr Ir Lavinia Marin TU Delft Electrical Engineering and Philosophy

The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education Engineering National Academies of Sciences (and Medicine),2018 In tracing the history of American higher education we find much to be proud of but we also see over the past few decades a growing tension between the broad and integrated education commonly referred to as liberal education and the increasing specialization in higher education as individual disciplines and administrative structures drive a fragmentation of curricula This tension between broad integrated education and specialized disciplinary studies has heightened during periods of economic challenge particularly since the Great Recession that began in 2008 Preface **Course XXI: Humanities and Engineering Or Science** Massachusetts Institute of Technology.
