Economics And Mental Health:

Economics and Mental Health Thomas G. McGuire, 1999 This paper is concerned with the economics of mental health We argue that mental health economics is like health economics only more so uncertainty and variation in treatments are greater the assumption of patient self interested behavior is more dubious response to financial incentives such as insurance is exacerbated the social consequences and external costs of illness are formidable We elaborate on these statements and consider their implications throughout the chapter Special characteristics of mental illness and persons with mental illness are identified and related to observations on institutions paying for and providing mental health services We show that adverse selection and moral hazard appear to hit mental health markets with special force We discuss the emergence of new institutions within managed care that address long standing problems in the sector Finally we trace the shifting role of government in this sector of the health economy

Ellis Q. Magee,2021 One in five adults in the United States experiences mental illness in a typical year Less than half get treatment The novel coronavirus pandemic has increased mental health pressures above that baseline This dissertation addresses the intersection between mental health and economic issues building upon two important findings 1 the economic finding of a bidirectional causal relationship between mental health and economic outcomes and 2 the psychiatric finding that mental wellness focused smartphone applications apps are effective Mental wellness apps are low cost scalable and pandemic appropriate but current use is limited Given the relationship between mental health and economic outcomes and the efficacy of mental wellness apps can we leverage mental wellness apps to improve economic outcomes The first two chapters of this dissertation report on my randomized controlled trials testing strategies to expand usage of mental wellness apps First I find providing mental wellness app privacy ratings increases selection of privacy preferred apps by six percentage points among likely app users a significant shift that could drive competitive pressures toward improved privacy protections Likely app users care about this issue and are willing to pay one third of the average monthly app price to access the ratings suggesting 80 million in social welfare gains from implementing privacy ratings nationally Second among individuals willing to download apps I find offering 3 for downloading installing and using a mental wellness app for two weeks does not have significant mental wellbeing or work productivity impacts on my sample as a whole Instead high productivity individuals see productivity increases of 0.127 standard deviations worth 20 per high productivity participant over the measured second week of treatment However low productivity participants experience no change or negative changes in productivity as a result of the intervention Taken together these findings suggest further research is necessary to clarify the conditions under which workplace use of mental wellness apps is beneficial before broadly implementing similar incentive schemes Third I investigate the presence and impacts of gender identity related social stigma on health and work
