Figure 19.5 Non-inflationary growth

When economic growth is supported by an outward movement of the aggregate supply curve, economies can experience non-inflationary growth. The movement from  $AD_1$  to  $AD_2$  indicates “normal” increases in aggregate demand due to growing populations and rising incomes. As long as the economy also makes improvements on the supply side to shift out the LRAS, then GDP will increase without any upward pressure on the price level a to b. The movement from  $Y_1$  to  $Y_2$  represents non inflationary growth.
