Eric Johnson, 2009-04-05 Security has been a human concern since the dawn of time With the rise of the digital society information security has rapidly grown to an area of serious study and ongoing research While much research has focused on the technical aspects of computer security far less attention has been given to the management issues of information risk and the economic concerns facing firms and nations Managing Information Risk and the Economics of Security provides leading edge thinking on the security issues facing managers policy makers and individuals Many of the chapters of this volume were presented and debated at the 2008 Workshop on the Economics of Information Security WEIS hosted by the Tuck School of Business at Dartmouth College Sponsored by Tuck's Center for Digital Strategies and the Institute for Information Infrastructure Protection I3P the conference brought together over one hundred information security experts researchers academics reporters corporate executives government officials cyber crime investigators and prosecutors The group represented the global nature of information security with participants from China Italy Germany Canada Australia Denmark Japan Sweden Switzerland the United Kingdom and the US This volume would not be possible without the dedicated work Xia Zhao of Dartmouth College
