The Handbook of New Zealand Mammals Carolyn King, David Forsyth, 2021-01-20 The Handbook of New Zealand Mammals is the only definitive reference on all the land breeding mammals recorded in the New Zealand region including the New Zealand sector of Antarctica It lists 65 species including native and exotic wild and feral living and extinct residents vagrants and failed introductions It describes their history biology and ecology and brings together comprehensive and detailed information gathered from widely scattered or previously unpublished sources The description of each species is arranged under standardised headings for easy reference Because the only native land breeding mammals in New Zealand are bats and seals the great majority of the modern mammal fauna comprises introduced species whose arrival has had profound effects both for themselves and for the native fauna and flora The book details changes in numbers and distribution for the native species and for the arrivals it summarises changes in habitat diet numbers and size in comparison with their ancestral stocks and some of the problems they present to resource managers For this third edition the text and references have been completely updated and reorganised into Family chapters The colour section includes 14 pages of artwork showing all the species described and their main variations plus two pages of maps **Terrestrial Cetartiodactyla** Luca Corlatti, Frank E. Zachos, 2022-09-29 This volume provides comprehensive overviews of each terrestrial cetartiodactyl species biology including palaeontology physiology genetics reproduction and development ecology habitat and diet Their economic significance and management as well as future challenges for research and conservation are also addressed Each chapter includes a distribution map a photograph of the animal and key literature This authoritative volume of the Handbook of the Mammals of Europe is a timely and detailed compilation of all European terrestrial cetartiodactyls and will appeal to academics and students in mammal research as well as to professionals dealing with mammal management including control use and conservation **Competition and Resource Partitioning in Temperate Ungulate Assemblies** R.J. Putman, 2012-12-06 Rory Putman addresses the question of how in many temperate ecosystems diverse and species rich assemblies of ungulates manage to co exist despite often quite extensive overlap in ecological requirements Putman explores the potential for competition competition tolerance and even positive facilitation amongst the members of such guilds of

ungulates As a central worked example the author employs data resulting from over 20 years of personal research into the ecology and population dynamics of various large herbivores of the New Forest in Southern England With these he applies formal protocols in resource use evidence for resource limitation and evidence for interaction between species in changing population size over the years

Bioenergetics Of Wild Herbivores Robert J. Hudson,2018-01-18 Bioenergetics is an emerging discipline which offers a more profound understanding of the ecology behaviour and evolution of wild herbivores Increasingly bioenergetic principles have been applied in management since they provide insight into population dynamics and are relevant to manipulation of habitats and assessment of the impacts of resource development Growing interest in the agricultural potential of wild herbivores has provided further impetus In spite of this promise there are few comprehensive syntheses of the concept and its application to wild herbivores This volume attempts to fill this need This book provides a great amount of detail but its expressive aim is to lead us to the whole animal to a herd to population as integral parts of an ecological entity which in turn is the result of evolutionary forces The concept of this book promises the realization of an overdue change in the approach to bioenergetics to nutrition and husbandry and thus to the management of wild herbivores the final emancipation from rules and views based primarily on domesticated herbivores or on experimental animals held under unnatural conditions necessarily impeding them behaviourally physically and psychically

Deer George A. Feldhamer,William J. McShea,2012-01-26 Think of deer and the image that pops into most American s minds is that of a white tailed deer the most common large mammal in North America Most Europeans are more familiar with red deer It may surprise many people to know that there are actually about 50 species of deer found throughout the world Here readers will find nontechnical expert information about the wide range of diverse deer species Did you know that elk and caribou are deer Or that the earliest fossils of deer are 15 to 20 million years old Have you ever wondered whether deer swim play or see color How do deer avoid predators and survive the winter Do deer make good pets or carry contagious diseases George A Feldhamer and William J McShea answer these and other intriguing questions about members of the deer family Cervidae From the diminutive pudu of South America that weighs 17 pounds to male moose that weigh close to 2 000 pounds Feldhamer and McShea explore the biology evolution ecology feeding habits reproduction and behavior of deer They chronicle the relationships between humans and deer both positive and negative and discuss the challenges of deer conservation and management With vivid color photographs and an accessible and engaging question and answer format this easy to read book is the go to resource on deer Nature lovers hunters and anyone curious about deer will find this fact filled book both fascinating and full of surprises

European Ungulates and Their Management in the 21st Century Marco Apollonio,Reidar Andersen,Rory Putman,2010-02-04 The first book to summarise management objectives for ungulates across Europe

Homosexual Behaviour in Animals Volker Sommer,Paul L. Vasey,2006-07-27 Behavioural observations from both the field and captivity indicate that same sex sexual interactions are widespread throughout the animal kingdom

and occur quite frequently in certain non human species Proximate studies of these phenomena have yielded important insights into genetic hormonal and neural correlates In contrast there has been a relative paucity of research on the evolutionary aspects Homosexual Behaviour in Animals seeks to readdress this imbalance by exploring animal same sex sexual behaviour from an evolutionary perspective Contributions focus on animals that routinely engage in homosexual behaviour and include birds dolphin deer bison and cats as well as monkey and apes such as macaques gorillas and bonobos A final chapter looks at human primates This book will appeal to graduate students and researchers in evolutionary biology biological anthropology zoology evolutionary psychology animal behaviour and anyone interested in the current state of knowledge in this area of behavioural studies **Journal of Reproduction and Fertility** ,1993-05 Includes the Proceedings of the Society for the Study of Fertility **Ungulate Management in Europe** Rory Putman,Marco Apollonio,Reidar Andersen,2011-04-28 This book considers a number of problems posed by ungulates and their management in Europe Through a synthesis of the underlying biology and a comparison of the management techniques adopted in different countries the book explores which management approaches seem effective and in which circumstances Experts in a number of different areas of applied wildlife biology review various management problems and alternative solutions including the impact of large ungulates on agriculture forestry and conservation habitats the impact of disease and predation on ungulate populations and the involvement of ungulates in road traffic accidents and possible measures for mitigation This book is directed at practising wildlife managers those involved in research to improve methods of wildlife management and policy makers in local regional and national administrations **Hoofed Mammals of British Columbia** David M.
