Family Crises:

Family Assessment: Rationale, Methods and Future Directions Theodore Jacob, Daniel L. Tennenbaum, 1988-05-31 The purpose of this book is to review existing and developing family assessment methods relevant to the study of psychopathology. It is our intention not only to inform clinical researchers of the many valuable family assessment methods that are available but also to encourage the incorporation of such procedures into future research efforts. In so doing we believe that our understanding of the etiology, course, treatment, and prevention of adult and childhood disorders will be greatly enriched. The book begins with an overview of the larger social and intellectual forces which have led to the current interest in studying family influences on psychopathology in children and adolescence. For each stream of influence we attempt to highlight theoretical and methodological contributions relevant to the family's role in the etiology, exacerbation, and treatment of childhood disorders. Next, a framework for classifying family measurement procedures is introduced in which three major dimensions are emphasized: unit of analysis, source of data, and construct assessed. The third and most important chapter provides detailed reviews of a selected number of methods within each of the major groupings that have been delimited, references, and brief descriptions of other measures that cannot be reviewed in detail, and a discussion of the promising and developing techniques that are known to the authors.

Family Transitions Celia Jaes Falicov, 1991-07-01 Of all concepts used by family therapists, the family development framework is among the least studied in spite of its relevance to understanding spontaneous family change and to facilitating therapeutic intervention. The notion that a developmental difficulty underlies the appearance of clinical symptoms has become a time-honored tradition in family therapy, just as it has been in individual therapy. Yet unlike the well-established and well-researched models of child and adult development, those in family development are rudimentary. Despite increasing interest in the family life cycle as a framework for family therapy, relatively little has been done to elucidate the specific dimensions and processes of spontaneous and therapeutically induced change over the family life cycle. This volume gathers original contributions of some of the most prominent family theorists, researchers, and clinicians of our time to improve our understanding of these important and

hitherto neglected domains The book opens with a comprehensive overview by the editor that outlines contributions to the family life cycle framework from family sociology and crisis theory This is followed by a comparative analysis of developmental thinking explicit or implicit in the theory and interventions of the major family therapy approaches Then divided into four parts FAMILY TRANSITIONS introduces new conceptual models that integrate the temporality of the life cycle approach with systems theory By their very nature these models cut across therapeutic orientations and have important clinical applications In Part II family therapy's views of development are freed from the confines of the therapist's office and placed in the context of other disciplines Chapters provide analysis of changing or static sociocultural values that can affect conceptions of development potential misuse of the concept of cultural identity in health mental health and education how family identity operates as a vehicle for cultural transmission over generations and family therapists' assumptions about women's development The role of expected and unexpected events in the family life cycle is the focus of Part III Chapters on clinical approaches geared to dislocations of life cycle occurrences due to unexpected crises chronic illnesses loss or drug abuse provide illustrations of interventions that utilize enhance or potentially detract from the family's developmental flow Part IV explores the articulation of the life cycle framework within four major family therapy orientations intergenerational structural systemic and symbolic experiential Each of these chapters endeavors to elucidate what is the place of family development in each orientation concepts of continuity and change use of the concept of stages transitions or developmental tasks the specific dimensions that change in most families over time and the links between family dysfunction and life cycle issues Finally each chapter illustrates through clinical example assessment strategies formulation of treatment goals and interventions as these emerge from a particular life cycle model FAMILY TRANSITIONS presents a significant advance in our understanding of functional and dysfunctional family development and offers a range of interventions to promote developmental change It is an invaluable resource for clinical psychologists psychiatrists social workers and counselors that will also interest human development professionals family sociologists and family researchers FAMILY TRANSITIONS can serve as a developmentally oriented textbook for teaching family therapy in academic and professional settings
