Ambasht, Navin K. Ambasht, 2012-12-06 Organisms and environment have evolved through modifying each other over millions of years Humans appeared very late in this evolutionary time scale With their superior brain attributes humans emerged as the most dominating influence on the earth Over the millennia from simple hunter food gatherers humans developed the art of agriculture domestication of animals identification of medicinal plants devising hunting and fishing techniques house building and making clothes All these have been for better adjustment growth and survival in otherwise harsh and hostile surroundings and climate cycles of winter and summer and dry and wet seasons So humankind started experimenting and acting on ecological lines much before the art of reading writing or arithmetic had developed Application of ecological knowledge led to development of agriculture animal husbandry medicines fisheries and so on Modern ecology is a relatively young science and unfortunately there are so few books on applied ecology The purpose of ecology is to discover the principles that govern relationships among plants animals microbes and their total living and nonliving environmental components Ecology however had remained mainly rooted in botany and zoology It did not permeate hard sciences engineering or industrial technologies leading to widespread environmental degradation pollution and frequent episodes leading to mass deaths and diseases **Bibliography on Reservoir Fishery Biology in North America** Robert M.
