Ecology, Conservation, and Management of Vernal Pool Ecosystems Carol W. Witham,1998      **Science and Conservation of Vernal Pools in Northeastern North America** Aram J. K. Calhoun,Phillip G. DeMaynadier,2007-08-13 Synthesizes Decades of Research on Vernal Pools Science Pulling together information from a broad array of sources Science and Conservation of Vernal Pools in Northeastern North America is a guide to the issues and solutions surrounding seasonal pools Drawing on 15 years of experience the editors have mined published literature      **Ecology and Conservation** Martin Thiel,2025 The tenth volume in The Natural History of the Crustacea series Ecology and Conservation emphasizes understanding the ecology of crustaceans as fundamental for their conservation in aquatic and terrestrial ecosystems Written by recognized experts studying a wide range of crustacean taxa and topics this volume synthesizes current research in a format that is accessible to a wide scientific audience      *Vernal Pools of Southern California* Ellen Bauder,1997      *The Biology of Mediterranean-Type Ecosystems* Karen J. Esler,Anna L. Jacobsen,R. Brandon Pratt,2018-03-09 The world s mediterranean type climate regions including areas within the Mediterranean South Africa Australia California and Chile have long been of interest to biologists by virtue of their extraordinary biodiversity and the appearance of evolutionary convergence between these disparate regions These regions contain many rare and endemic species Their mild climate makes them appealing places to live and visit and this has resulted in numerous threats to the species and communities that occupy them Threats include a wide range of factors such as habitat loss due to development and agriculture disturbance invasive species and climate change As a result they continue to attract far more attention than their limited geographic area might suggest This book provides a concise but comprehensive introduction to mediterranean type ecosystems It is an accessible text which provides an authoritative overview of the topic As with other books in the Biology of Habitats Series the emphasis in this book is on the organisms that dominate these regions although their management conservation and restoration are also considered      **Sunridge Properties, Rancho Cordova** ,2010      *Developments in Soil Salinity Assessment and Reclamation* Shabbir A. Shahid,Mahmoud A. Abdelfattah,Faisal K. Taha,2013-01-15 The papers assembled here cover topics such as technological advances in soil salinity mapping and monitoring management and reclamation of salt affected soils use of marginal quality water for crop production salt tolerance mechanisms in plants biosaline agriculture and agroforestry microbiological interventions for marginal soils opportunities and challenges in using marginal waters and soil and water management in irrigated agriculture      *Angeles, Cleveland, Los Padres, San Bernardino National Forests (N.F.), Revised Land Management Plans* ,2005      *Land Use Scenarios* Alan W. Shearer,David A. Mouat,Scott D. Bassett,Michael W. Binford,Craig W. Johnson,Justin A. Saarinen,Alan W. Gertler,Julide Koracin,2009-01-14 Any alteration of the natural processes occurring on a piece of land will have expected as well as unanticipated effects and those effects have little regard for arbitrary human boundaries Consequently it is not enough for land managers to consider only how they

might maintain the parcels for which they are responsible they must also anticipate      **California Grasslands** Mark R. Stromberg, Jeffrey D. Corbin, Carla D'Antonio, 2007-12-03 This highly synthetic and scholarly work brings together new and important scientific contributions by leading experts on a rich diversity of topics concerning the history ecology and conservation of California's endangered grasslands The editors and authors have succeeded admirably in drawing from a great wealth of recent research to produce a widely accessible and compelling state of the art treatment of this fascinating subject Anyone interested in Californian biodiversity or grassland ecosystems in general will find this book to be an invaluable resource and a major inspiration for further research management and restoration efforts Bruce G Baldwin W L Jepson Professor and Curator UC Berkeley Grasses and grasslands are among the most important elements of the California landscape This is their book embodying the kind of integrated view needed for all ecological communities in California Approaches ranging across an incredibly broad spectrum paleontology and human history basic science and practical management techniques systematics community ecology physiology and genetics physical factors such as water soil nutrients atmospheric and fire biological factors such as competition symbiosis and grazing are nicely tied together due to careful editorial work This is an indispensable reference for everyone interested in the California environment Brent Mishler Director of the University Jepson Herbaria and Professor of Integrative Biology UC Berkeley The structure and function of California grasslands have intrigued ecologists for decades The editors of this volume have assembled a comprehensive set of reviews by a group of outstanding authors on the natural history structure management and restoration of this economically and ecologically important ecosystem Scott L Collins Professor of Biology University of New Mexico      Small Water Bodies of the Western Balkans Vladimir Pešić, Djuradj Milošević, Marko Miliša, 2021-11-18 The small water bodies such as headwater streams springs ditches small lakes and ponds are critical to maintaining freshwater biodiversity This is especially true for Dinaric karst where they are often the only water bodies present However despite their importance they remain widely overlooked and excluded from government policies like the EU Water Framework Directive This book includes information on different aspects of these essential but still neglected habitats This book intends to be of interest to a wide range of audiences from researchers and conservationists to the public and decision makers      **Threatened and Endangered Species Due to the Urban Growth Within the Multiple Habitat Conservation Program Planning Area** ,2004

*Pacific Gas & Electric Company, San Joaquin Valley Operations and Maintenance Program Habitat Conservation Plan* ,2006      *Proposed United States Penitentiary, Lompoc* ,2003      Fort Rosecrans National Cemetery Annex ,2007      **Route 82/85/11 Corridor Transportation Improvements** ,1999      **Plant and Animal Endemism in California** Susan Harrison, 2013-05-15 California is globally renowned for its biological diversity including its wealth of unique or endemic species Many reasons have been cited to explain this abundance the complex geology and topography of its landscape the special powers of its Mediterranean type climate and the historic and modern barriers to the wider dispersal of its flora and

fauna Plant and Animal Endemism in California compiles and synthesizes a wealth of data on this singular subject providing new and updated lists of native species comparing patterns and causes of both plant and animal endemism and interrogating the classic explanations proposed for the state's special significance in light of new molecular evidence Susan Harrison also offers a summary of the innovative tools that have been developed and used in California to conserve and protect this stunning and imperiled diversity

**East Contra Costa County Habitat Conservation Plan and Natural Community Conservation Plan**, 2006     *Final Environmental Impact Statement*, 2005     *Recent Advances in Freshwater Crustacean Biodiversity and Conservation* Tadashi Kawai, D. Christopher Rogers, 2021-03-07

*Recent Advances in Freshwater Crustacean Biodiversity and Conservation* focuses on minor crustacean groups and regionally endemic groups all from freshwaters Chapters in this book cover crustaceans such as Maxillopods Mysids Cumaceans Isopods Amphipods Branchiopods Copepods and Decapods Each looks at global or regional fauna and discusses conservation issues for that group The majority of the chapters are based on papers presented at symposia organized by the editors at two international scientific meetings held in Barcelona and Washington DC The contributors are world renowned experts on their groups as well as on freshwater crustacean conservation and biodiversity at global levels It has previously been difficult for conservation managers NGOs and university professors and students who may not have access to comprehensive journal subscriptions to find relevant information on diversity and conservation of freshwater crustaceans This book meets that need addressing crustacean groups not previously treated and providing additional information beyond any presented in existing books As the editors write in their introduction we cannot conserve and we cannot protect what we do not know exists This is a reliable cutting edge reference for anybody involved in crustacean research students researchers agencies and NGOs as well as science educators conservationists and government conservation policymakers The book will also be useful for those working in aquaculture and fisheries given that many of the taxa discussed are economically important
