Ecology and Earth History Richard Nathaniel Twisleton-Wykeham-Fiennes, 2012-02-12 This volume outlines in simple terms the basic concepts of ecology It is not a textbook of ecology but an introduction to the subject and to the more advanced presentations of special aspects that will appear in succeeding volumes There are many excellent textbooks of ecology to some of which the reader is referred and to which the present volume should also serve as a useful primer I have linked this presentation of ecological theory to a survey of present theories of Earth History All of earth history is in a sense ecology Earth s environments have evolved throughout the ages from the time when no life existed just as life forms have evolved from primitive to complex It seems to me therefore that one should understand how these environments have come into being I have also presented a simple account of the energy systems that are used by living things These too need to be understood if we are to appreciate energy problems Man like all other living things requires the energy provided by his food but unlike other creatures his way of life demands additional auxiliary energy and this has introduced a new factor to man s ecology Hitherto most of this auxiliary energy has been obtained from fossil fuels coal oil and uranium But these are not inexhaustible they represent capital not income and it is still not clear what the sources of the auxiliary energy will be

Eguiarte, 2018-10-02 The aim of this first book is to introduce the readers of the series to why Cuatro Ciénegas Basin CCB is so unique starting with the reason why astrobiologists became interested in this oasis in the first place namely the high diversity and abundance of stromatolites and microbial mats in continental waters to be found in the desert oasis As NASA has long since discovered the basin may offer the best analog of early Earth In essence CCB is a time machine that can take us far back and forth in time In the respective chapters the contributing authors explain the extraordinary microbial diversity of Cuatro Ciénegas Basin from various perspectives In order to do so they explain their journey as well as the different tools used to unravel the basin's mysteries such as Why are there so many species in a place without food How has life there survived the enormity of tectonic shifts through the ages maintaining its ancient marine heritage **The History and Sedimentology of Ancient Reef Systems** George D. The chapter also addresses mass extinction and provides a general overview of the history of reefs.

A History of Technology and Environment Edward Golding, 2016-12-08. This book provides an accessible overview of the ways that key areas of technology have impacted global ecosystems and natural communities. It offers a new way of thinking about the overall origins of environmental problems. Combining approaches drawn from environmental biology and the history of science and technology, it describes the motivations behind many technical advances and the settings in which they occurred before tracing their ultimate environmental impacts. Four broad areas of human activity are described: over harvesting of natural resources using the examples of hunting, fishing and freshwater use; farming; population, land use and migration; discovery, synthesis and use of manufactured chemicals; and development of sources of artificial energy and the widespread pollution caused by power generation and energy use. These innovations have been driven by various forces but in most cases new technologies have emerged out of fascinating, psychologically rich human experiences. This book provides an introduction to these complex developments and will be essential reading for students of science, technology and society, environmental history and the history of science and technology.
