Contemporary Global Perspectives on Gender Economics

Moore, Susanne, 2015-07-24 The rise of women in the workforce has led to many campaigns for wage equality and the impartial treatment of both sexes as they pursue careers previously designated as either a man's or a woman's job. The impact of these campaigns has been felt but a sense of gender stereotyping still affects not only the social and cultural well-being of the modern organization but the drive for innovation and economic success as well. Contemporary Global Perspectives on Gender Economics challenges current economic theory targeting the way gender is often used for economic gain or increased market share. Experts realize that company growth can no longer be achieved by taking a conventional approach but few follow through with introducing new frameworks that change the way diversity is treated. By acknowledging that issues like childcare and the wage gap are not only a woman's challenge this book speaks to legislators and policymakers, economic developers, corporate practitioners, educational faculties and students of all disciplines who are looking to change the way gender is viewed in the workforce. This essential reference source features chapters that combine the concepts of gender theory, sociology and economics and cover topics including economic equality, gender bias, the history of gender economics, industrial creativity and the impact of social connectedness on life satisfaction. Carbon dioxide removal: Perspectives from the social sciences and humanities Anders Hansson, Mathias Fridahl, Miranda Boettcher, Shinichiro Asayama, 2024-07-09 Carbon dioxide removal (CDR) approaches are becoming increasingly central to visions of decarbonizing national economies. The past few years have seen an increasing number of countries committed to net zero targets preceded by a surge of modelled 1.5°C scenarios envisioning large-scale future CDR deployment. The prospect of CDR deployment raises new complex socio-ecological challenges and presents new deep uncertainties. These complexities, challenges and uncertainties cannot be investigated using solely the techno-economic modelling and environmental risk assessment methods that currently dominate the construction of policy-relevant knowledge on CDR. Social sciences and the humanities perspectives on CDR are often restricted to instrumental tasks such as investigating public acceptance, overcoming social resistance or supporting the development of integrated assessment models. There is a need for more diverse investigations of CDR which include not only environmental and techno-economic dimensions but also explore key societal complexities, challenges and uncertainties. Against this backdrop we call for submissions on CDR stemming from perspectives within the social sciences and humanities. We encourage novel empirical and theoretical contributions on CDR-related policy design or analyses of recent policy developments at sub-national, national and international levels of governance e.g. in context of climate targets and strategies, climate tipping points, mitigation, deterrence or societal transformations.
