Familiar medical quotations Maurice Benjamin Strauss,1980 **Oxford Dictionary of Medical Quotations** Peter McDonald,2004 The Oxford Dictionary of Medical Quotations presents a wonderfully entertaining and eclectic range of quotations covering all aspects of medicine through the ages It couples profound statements from famous scientists with witty one liners from the likes of Woody Allen and Spike Milligan Packed with hundreds of quotations it is a book that anyone in the medical profession or with an interest in health will find an invaluable source of reference and considerable entertainment A few examples I m not afraid to die I just don t want to be there when it happens Woody Allen The only cure for sea sickness is to sit on the shady side of an old brick church in the country English sailors proverb The nurse should never neglect to attend to the patient s bodily hygiene on the pretext that such measures do little good and are not urgent Florence Nightingale **Medicine in Quotations** Edward J. Huth,T. J. Murray,2006 Who was the first to write about a certain disease diagnose it and treat it This book answers those questions for a wide range of diseases from Abetalipoproteinemia to Zollinger Ellison syndrome What were the medical practitioners of previous generations hoping to achieve What were their patients expecting of them The answers are found in these quotations Containing over 3 000 entries and now updated with more than 450 new quotations this new edition of Medicine in Quotations is the most comprehensive collection of its type published in over 30 years It is much more than a random collection of famous sayings relating to sickness and health disease and treatment it is a portrait of medicine throughout recorded history You will discover how medical concepts and practices have developed and shifted through the millennia and how many illnesses recognized today were first identified a thousand or more years ago Quotations are organized by topic and each is fully referenced allowing curious readers to return to the original source Subject and author indices make it easy to find quotations of interest Medicine in Quotations is an invaluable resource for writers speakers and all those interested in the history of medicine

Expedition and Wilderness Medicine Gregory H. Bledsoe,Michael J. Manyak,David A. Townes,2008-11-03 With an increase in visits to remote and dangerous locations around the world the number of serious and fatal injuries and illnesses associated with these expeditions has markedly increased Medical personnel working in or near such locations are not always explicitly trained in the management of unique environmental injuries such as high altitude sickness the bends lightning strikes frostbite acute dehydration venomous stings and bites and tropical diseases Many health care professionals seek training in the specialty of wilderness medicine to cope with the health risks faced when far removed from professional care resources and the American College of Emergency Medicine has recently mandated that a minimum level of proficiency needs to be exhibited by all ER physicians in this discipline This book covers everything a prospective field physician or medical consultant needs to prepare for when beginning an expedition and explains how to treat a variety of conditions in a concise clinically oriented format

Reconsidering Medicine Lucien Karhausen,2024-01-05 This is an original book on the philosophy of medicine It considers philosophy of medicine as a subdiscipline of philosophy of science This volume is grounded on an epistemological bottom up account that arises from the clinical situation the epidemiologic and the resulting public health account It is not a review of the literature and it is not intended to frame the debates or to analyze and compare the various number of viewpoints Medicine is the human activity which begins by a linguistic act that identifies the negative norms of health it

begins with a first distinction that splits biological processes into three conventional parts normal abnormal and pathologic Neither of them is a natural kind Being abnormal is intrinsically bad and admits of degrees while being pathologic is dichotomous Being normal is factitious and counterfactual much the same as frictionless planes in physics Leaving apart the ethical aspects this book endeavors to uncover the implicit conceptual network the chief junctures of medicine should they be found and their articulations with clinical and community medicine It results that medicine is pervaded with dichotomous concepts such as scientific vs pragmatic discourse function and malfunction abnormal and pathologic needs and wants causation and explanation clinical vs community oriented care physical vs psychiatric diseases mental illness vs deviancy and so on Medical thinking has two dimensions intrinsically interweaved namely a constant amalgam and admixture of biological and normative aspects so that this essential hybrid nature of the grammar of medicine endorses opposite approaches naturalistic or normativist biological or value laden realist or instrumental reductionist or holistic phenomenological or analytic

Clinical Behavioral Medicine I.E. Wickramasekera, 2013-06-29 This book is an effort to integrate some clinical observations theoretical concepts and promising clinical procedures that relate psychological variables to physiological variables My primary emphasis is on what psychological and behavioral concepts and procedures are most likely to enable us to influence physiological functions The book covers questions that have fascinated me and with which I have struggled in daily clinical practice What types of people are most at risk for physical disorders or dysfunctions Why do some people present psychosocial conflicts somatically and others behaviorally What is the placebo effect and how does it work How do you arrange the conditions to alter maladaptive belief systems that contribute to psychopathology and pathophysiology Do beliefs have biological consequences When I was in private clinical practice and even today in my medical school clinical practice situation I set aside one day each week to puzzle over the theoretical questions that my clinical experience generates Often isolating these underlying theoretical questions provides guidance into the most relevant empirical literature I have found that this weekly ritual which I started in private practice many years ago appears to increase my clinical efficacy or at least makes clinical work more exciting I find the unexamined clinical practice hard to endure Kurt Lewin once said There is nothing so practical as a good theory

Next Medicine Walter Bortz, MD, 2011-01-03 Every year the average American spends about 7 300 on medical expenses The typical Canadian pays 2 700 the Briton only 2 000 And yet according to the World Health Organization our healthcare system in terms of total quality ranks thirty eighth in

the world right between Costa Rica and Slovenia Not only do 40 million Americans lack health insurance but more than 200 000 die each year because of medical mistakes Our average life expectancy is lower than Cuba s In *Next Medicine* Dr Walter Bortz zeroes in on why the American medicine is spiraling toward disaster A physician with fifty years of experience and a leading authority on aging Bortz argues that the financial interests of biotech and drug companies have distorted the healthcare system Thanks to them medicine today is economically motivated to treat disease rather than to prevent it Heart disease for example is widely treated with drug interventions and invasive surgery both of which are extravagantly profitable for pharmaceutical giants and hospitals Daily exercise and a healthy diet on the other hand can prevent heart disease and can be obtained by patients essentially for free but there s no money in that The medical industrial complex has a vested interest in keeping us sick and until that changes medicine will fail to effectively address the leading cause of disability and mortality today chronic diseases like diabetes that are largely preventable Bortz proposes a medical system that emphasizes personal responsibility and provides incentives for healthy lifestyle choices along with new training for medical professionals Through a lively narrative full of personal anecdotes and jarring statistics Bortz makes a powerful case for a radically new medical system one that is based on rigorous science and loosens the strangle hold of corporate interests on American health
