Modern Theories Of The Unconscious W L Northridge,2013-07-04 This is Volume XXIII of thirty eight in the General Psychology series So much has been written in recent years on the Unconscious that the time seems opportune to compare and contrast the various important theories that have held the field Originally published in 1924 this present book aims at a general review of this kind The subject is Modern Theories of the Unconscious but as a study of current theories cannot well be entered upon without considering early theories we include the latter in our general survey and devote the first chapter to their consideration On account of its importance in modem psychology Freud s theory is kept much in evidence throughout and frequent references are made to it when dealing with the work of other authors The Nature Of Laughter J C Gregory,2013-11-05 First Published in 1999 This is Volume X of thirty eight in the General Psychology series Written in 1924 this book looks at the aspects such as wit and the ludicrous varieties causes function and aesthetics of laughter and its place in civilisation The Measurement of Emotion W Whately Smith,2013-11-05 Two of the most characteristic features of modern psychology are 1 the special attention given to the facts of emotional consciousness and 2 the persistent endeavour to obtain a quantitative statement of results In the former respect advance has been due mainly to the adoption of the biological method By taking the biological problem of instinct and the psychological problem of emotion in conjunction a provisional solution has been obtained of both much as two nuts may be more easily cracked together than when taken separately In the latter respect mental measurement has been mainly indirect in character although the possibility of direct mental measurement is not entirely ruled out What is measured is some physiological concomitant or other of the mental process not the mental process itself Nevertheless since the mental character of the process prompts the measurement and furnishes its relevance such measurement rightly belongs to psychology although of course it also belongs to physiology The present work by Mr Whately Smith well illustrates these two features In it the biological significance of emotion and of affective tone is emphasised and by means of special methods of experimentation quantitative results are obtained which illuminate the subject in a remarkable way This edition first published in 1999 Routledge is an imprint of Taylor Francis an informa company *Men And Their Motives* J.C. Flugel,2013-07-04 This is Volume IV of thirty eight in a collection on General Psychology Originally published in 1934 this study is an psycho analytic look at men and their motives and includes

Kiesler,2017-09-29 To understand the process of psychotherapeutic change one must look for the answers in the psychotherapeutic process itself This process involves the exchange of communications between two or more participants and as a result of the exchange modifications in the personality and behavior of the patient are expected to occur But what is the nature of the therapeutic messages How do they produce changes in the patient What aspects of the messages are important for therapeutic change And if the therapeutic force is somehow encoded in the messages where shall we look for it in sentence structure in emotional overtones in gestures and body movements The Process of Psychotherapy is divided into two major parts dealing respectively with method and with systems In Part I the author presents an analysis of psychotherapy process research from a communications perspective developing an incisive and detailed analysis of the methodological issues that confront researchers in this field and suggesting theoretical and empirical strategies for addressing these issues Part II provides the first exhaustive and detailed summary of extant psychotherapy process systems The author first deals with direct systems those procedures of content analysis or rating scales that have been developed to assess the exchanges between therapists and patients Seventeen major direct process systems are presented in detail and are summarized with ample citations to the literature The final section of the book offers an exhaustive listing and concise description of various indirect measures of psychotherapy process which do not assess the verbatim interview exchanges of the participants in therapy but rather assess the participants perceptions via self report or standard analogue procedures This book is a basic sophisticated and exhaustive coverage of psychotherapy process and content analysis that will become the standard and authoritative source for anyone interested in the process of psychotherapy whether as student researcher or practitioner *The Big Five Trait*
