Plant Communities is the first systematic and comprehensive account of the vegetation types of this country. It covers all natural, semi-natural and major artificial habitats in Great Britain but not Northern Ireland, representing the fruits of fifteen years of research by leading plant ecologists. The book breaks new ground in wedding the rigorous interest in the classification of plant communities that has characterised Continental phytosociology with the deep concern traditional in Great Britain to understand how vegetation works.

**Remarks on the Geographical Distribution of British Plants, Chiefly in Connection with Latitude, Elevations, and Climate** Watson, 1836      *The Flora and Vegetation Changes of Britain* Arthur Roy Clapham,      Hybrid Flora of the British Isles Clive A. Stace, Christopher David Preston, D. Pearman, 2015

Vascular plant hybrids are numerous and constitute an important feature of our vegetation, but all too often they have been neglected by botanists. Some hybrids between native species are rare, sterile and ephemeral, but others reproduce vegetatively or by seed and have spread beyond the areas where their parents coexist. In addition, numerous hybrids have escaped from gardens to become established in the wild. Interspecific hybridisation is particularly significant as it represents a major evolutionary pathway in flowering plants; frequently it alters the characteristics of both native and alien taxa and it generates new species. The hybrid flora of the British Isles has been studied in more detail than that of any other region and it therefore provides an ideal opportunity to study the occurrence of hybrids in wild vegetation. This book provides detailed accounts of the 909 hybrids reliably recorded in the wild in the British Isles. Of particular interest to BSBI members are the comprehensive identification notes, including a summary of the differences from the parents, enabling naming and recording of hybrids to a degree not attainable previously. The habitats of the hybrids are outlined and detailed accounts of their distributions are provided, with notes on the discovery of many hybrids. There are 388 novel maps illustrating the records of the commoner hybrids in relation to those of their parents. Known chromosome numbers are given for each hybrid and its parents, and information is provided on the hybrid's fertility, sterility and its capacity for vegetative reproduction. Experimental and molecular studies of the hybrids in the British Isles and elsewhere in their ranges are summarised. Briefer notes are given on a further 156 hybrids, including some which are erroneously or doubtfully recorded and others which might potentially occur as escapes from cultivation.

**Flora of Great Britain and Ireland: Volume 4, Campanulaceae - Asteraceae** Peter Sell, Gina Murrell, 2006-04-06. This critical Flora provides a definitive account of the native species, naturalised species, frequent garden escapes and casuals found in the British Isles. Full keys and descriptions will enable the user to name all plants occurring in the wild, plus some ornamental trees and shrubs. For the first time, detailed accounts of all the large apomictic genera are given, and many infraspecific variants are included. Each species entry begins with the accepted Latin name, synonyms and the common English name. A detailed description follows, including information on flowering period, pollination and chromosome number. Separate descriptions are given for infraspecific taxa. Information on the status, ecology and distribution, including worldwide distribution of the species and infraspecific taxa, is also given. Clear black and white line

drawings illustrate an extensive glossary and also illuminate the diagnostic features in a number of groups of plants

*Studies in the Vegetational History of the British Isles*, **Aquatic Plants in Britain and Ireland** C. D. Preston, Jane M. Croft, 2022-06-13 Over the past 50 years major changes have taken place in the distribution of aquatic plants in Europe Many species have declined whilst other species have increased in abundance or spread including several that were originally introduced from the New World Despite the relative richness of the aquatic flora of Britain and Ireland it is a neglected area of study This book is not an identification manual but provides a summary of the distribution habitat and reproductive biology of 200 taxa in 72 genera with individual distribution maps and also summarizes their distribution overseas A joint project of I T E now C E H the Joint Nature Conservation Committee and the Environment Agency

Comparative Plant Ecology J.P. Grime, J.G. Hodgson, R. Hunt, 2014-11-14 The main object of this book is to provide standardized Autecological Accounts of the biology and ecology of common vascular plants of the British flora The structure and content of each Account and in particular the balance between data presentation and interpretation has been strongly influenced by our concern to meet the specific requirements of academic research vegetation management and nature conservation Consequently the book contains a rather lengthy section Chapter 4 which describes in some detail the various ways in which the Accounts may be used in efforts either to understand the ecology of species or to manipulate their distribution and abundance *Field Guide to Invasive Plants and Animals in Britain* Olaf Booy, Max Wade, Helen

Roy, 2015-04-23 This field guide will enable the identification of a range of invasive plants and animals now found in Britain The impact of invasive organisms is second only to habitat loss as a threat to biodiversity and yet despite increasing ecological awareness people remain largely unaware of these plants and animals and their potentially devastating impact Although most biological introductions fail many prove successful and these can prove disastrous for native fauna and flora Though these species are of particular concern to conservationists there has previously been no unified guide devoted to their recognition This book will act both as an ID guide appealing to the amateur naturalist and as an important tool for ecologists and land managers attempting to tackle the problem posed by invasive species British Plant Communities:
