The Orchid Flora of Taiwan: A Collection of Line Drawings Tsan-Piao Lin, 2019-12-01 The history of written records of native orchids in Taiwan began in 1857 with a British botanist After more than 160 years of study by European Japanese and Taiwanese scholars and enthusiasts the list of native orchids increased to more than 470 species including natural hybrids and varieties The author exerted extensive efforts to include all known species in this work and arranged them based on the order of subfamilies Scientific names synonyms and relevant references are provided for each species Many of the species are provided with additional explanations in the note section The uniqueness of this book is the line drawing illustrations which emphasize the structure of the column In total 500 figures are presented to accompany the species descriptions These extensive line drawings were accumulated since 1971 and were mostly drawn by the author More than that this book also presents the gynostemium structure of more than 380 species including the stigma pollinium rostellum and column in high resolution color plates

Plants on Plants - The Biology of Vascular Epiphytes Gerhard Zotz,2016-09-01 This book critically reviews advances in our understanding of the biology of vascular epiphytes since Andreas Schimper s 1888 seminal work It addresses all aspects of their biology from anatomy and physiology to ecology and evolution in the context of general biological principles By comparing epiphytes with non epiphytes throughout it offers a valuable resource for researchers in plant sciences and related disciplines A particular strength is the identification of research areas that have not received the attention they deserve with conservation being a case in point Scientists have tended to study pristine systems but global developments call for information on epiphytes in human disturbed systems and the response of epiphytes to global climate change
