Black, William R. Lund, David P. Schwartz, Harold E. Gill, Bea H. Mayes, 1996 The South Fork Dry Creek and Dry Gulch sites lie within a few hundred meters of each other in the southeastern part of the Salt Lake Valley and together provide the only location on the heavily urbanized Salt Lake City segment of the Wasatch fault zone where it is possible to develop a complete surface faulting chronology for the segment since middle Holocene time the past 6 000 years Investigations at the two sites took place intermittently between 1985 and 1995 as permission was obtained to trench more and more of the scarps within the broad fault zone The new information reported here on the size timing and especially recurrence of surface faulting earthquakes on the Salt Lake City segment shows that the earthquake hazard presented by this segment of the Wasatch fault is greater than previously thought Such information is vital to public officials planners and others making decisions regarding earthquake hazard mitigation 22 pages 1 plate **TT.** Clearinghouse for Federal Scientific and Technical Information (U.S.), 1968 Translations of scientific and technical monographs and articles Water-supply Paper , 1943 Stream-gaging Procedure Don Melvin Corbett, 1943 **Water-supply Paper** Geological Survey (U.S.), 1905 *Focus on Value* James L.
