Stressors in the Marine Environment Martin Solan, Nia Whiteley, 2016-03-10 A multitude of direct and indirect human influences have significantly altered the environmental conditions composition and diversity of marine communities However understanding and predicting the combined impacts of single and multiple stressors is particularly challenging because observed ecological feedbacks are underpinned by a number of physiological and behavioural responses that reflect stressor type severity and timing Furthermore integration between the traditional domains of physiology and ecology tends to be fragmented and focused towards the effects of a specific stressor or set of circumstances This novel volume summarises the latest research in the physiological and ecological responses of marine species to a comprehensive range of marine stressors including chemical and noise pollution ocean acidification hypoxia UV radiation thermal and salinity stress before providing a perspective on future outcomes for some of the most pressing environmental issues facing society today Stressors in the Marine Environment synthesises the combined expertise of a range of international researchers providing a truly interdisciplinary and accessible summary of the field It is essential reading for graduate students as well as professional researchers in environmental physiology ecology marine biology conservation biology and marine resource management It will also be of particular relevance and use to the regulatory agencies and authorities tasked with managing the marine environment including social scientists and environmental economists

Toxicology of the Human Environment Chris J Rhodes, 2000-02-24 The environment in which human beings live is complex and we may encounter many different potentially toxic chemical substances during the course of our lives These xenobiotic agents may invade the living system in the form of environmental pollutants in the diet as pharmaceutically administered compounds or even as chemical weapons and it is becoming widely recognised that free radicals are often involved in this toxicity The book covers all aspects of toxic agents in the environment from their detection to their effects Final year undergraduates and postgraduates studying toxicology biochemistry cell biology or environmental science will find this book valuable reading
