Busquets, 2019-11-19 This book explores secession from three normative disciplines political philosophy international law and constitutional law The author first develops a moral theory of secession based on a hypothetical multinational contract Under this contract theory injustices do not determine the existence of a right to secede but the requirements to exercise it The book's second part then argues that international law is more inclined to accept and advance a remedial right approach to secession Therefore justice as multinational fairness is to be fully institutionalized under the constitutional law of liberal democracies The final part proposes constitutionalizing a qualified right to secede with the aim of fostering recognition and accommodation of national pluralism as well as cooperation and compromise between majority and minority nations

Vanrolleghem,2001-12-01 Environmental quality is becoming an increasing concern in our society In that context waste and wastewater treatment and more specifically biological wastewater treatment processes play an important role In this book we concentrate on the mathematical modelling of these processes The main purpose is to provide the increasing number of professionals who are using models to design optimise and control wastewater treatment processes with the necessary background for their activities of model building selection and calibration The book deals specifically with dynamic models because they allow us to describe the behaviour of treatment plants under the highly dynamic conditions that we want them to operate e g Sequencing Batch Reactors or we have to operate them e g storm conditions spills Further extension is provided to new reactor systems for which partial differential equation descriptions are necessary to account for their distributed parameter nature e g settlers fixed bed reactors The model building exercise is introduced as a step wise activity that in this book starts from mass balancing principles In many cases different hypotheses and their corresponding models can be proposed for a particular process It is therefore essential to be able to select from these candidate models in an objective manner To this end structure characterisation methods are introduced Important sections of the book deal with
