Free Electron Lasers 2000:

Free Electron Lasers 2000 V.N. Litvinenko, Y.K. Wu, 2005-12-27 The 22nd International Free Electron Laser Conference and 7th FEL User Workshop were held August 13-18 2000 at Washington Duke Inn and Golf Club in Durham North Carolina USA. The conference and the workshop were hosted by Duke University's Free Electron Laser FEL Laboratory. Following tradition the FEL prize award was announced at the banquet. The year 2000 FEL prize was awarded to three scientists propelling the limits of high power FELs: Steven Benson, Eisuke Minehara, and George Neill. The conference program was comprised of traditional oral sessions on First Lasing, FEL theory, storage ring FELs, linac and high power FELs, long wavelength FELs, SASE FELs, accelerator and FEL physics and technology, and new developments and proposals. Two sessions on accelerator and FEL physics and technology reflected the emphasis on the high quality of accelerators and components for modern FELs. The breadth of the applications was presented in the workshop oral sessions on materials processing, biomedical and surgical applications, physics and chemistry, as well as on instrumentation and methods for FEL applications. A special oral session was dedicated to FEL center status reports for users to learn more about the opportunities with FELs. As usual, the oral sessions were supplemented by poster sessions with in-depth discussions and communications. The FEL physicists and FEL users had excellent opportunities to interact throughout the duration of the event, culminating in a Joint Sessions. The year 2000 was very successful, being marked by lasing with two SASE and one storage ring short wavelength FELs and by the first human surgery with the use of FEL. To mention but a few, The International Program Committee and chairs of the sessions had the challenging and exciting problem of selecting invited and contributed talks for the conferences and the workshop from the influx of abstracts mentioning new results and ideas. The success of the conference was determined by these contributions. Scientists from 15 countries gave 70 talks, presented 176 posters, and submitted 146 papers which are published in the present volume of proceedings. **Free Electron Lasers 2000**, 2001. **Free Electron Lasers 2000** Vladimir N. Practical considerations and experimental results for high gain FELs. *Ultraviolet and Soft X-Ray Free-Electron Lasers* Peter Schmüser, Martin Dohlus, Jörg Rossbach, 2008-10-06. The high scientific interest in coherent X-ray light sources has stimulated world-wide efforts in developing X-ray lasers. In this book a particularly promising approach is described: the free electron laser FEL, which is pursued worldwide and holds the promise to deliver ultra-bright X-ray pulses of

femtosecond duration Other types of X ray lasers are not discussed nor do we try a comparison of the relative virtues and drawbacks of different concepts The book has an introductory character and is written in the style of a university textbook for the many newcomers to the field of free electron lasers graduate students as well as accelerator physicists engineers and technicians it is not intended to be a scientific monograph for the experts in the field Building on lectures by one of us J R at the CERN Accelerator School and motivated by the positive response to a series of seminars on FEL theory for pedestrians given by P S within the framework of the Academic Training Program at DESY we have aimed at presenting the theory of the low gain and the high gain FEL in a clear and concise mathematical language Particular emphasis is put on explaining and justifying the assumptions and approximations that are needed to obtain the differential equations describing the FEL dynamics Although we have tried our best to be simple the mathematical derivations are certainly not always as simple as one would like them to be However we are not aware of any easier approach to the FEL theory Some of the more involved calculations are put into the appendices

Free Electron Lasers 2003 Eisuke J. Minehara, Masaru Sawamura, Ryoichi Hajima, 2012-12-02 This book contains the Proceedings of the 25th International Free Electron Laser Conference and the 10th Free Electron Laser Users Workshop which were held on September 8-12 2003 in Tsukuba Ibaraki in Japan

Free-Electron Lasers in the Ultraviolet and X-Ray Regime Peter Schmüser, Martin Dohlus, Jörg Rossbach, Christopher Behrens, 2014-02-19 The main goal of the book is to provide a systematic and didactic approach to the physics and technology of free electron lasers Numerous figures are used for illustrating the underlying ideas and concepts and links to other fields of physics are provided After an introduction to undulator radiation and the low gain FEL the one dimensional theory of the high gain FEL is developed in a systematic way Particular emphasis is put on explaining and justifying the various assumptions and approximations that are needed to obtain the differential and integral equations governing the FEL dynamics Analytical and numerical solutions are presented and important FEL parameters are defined such as gain length FEL bandwidth and saturation power One of the most important features of a high gain FEL the formation of microbunches is studied at length The increase of gain length due to beam energy spread space charge forces and three dimensional effects such as betatron oscillations and optical diffraction is analyzed The mechanism of Self Amplified Spontaneous Emission is described theoretically and illustrated with numerous experimental results Various methods of FEL seeding by coherent external radiation are introduced together with experimental results The world's first soft X ray FEL the user facility FLASH at DESY is described in some detail to give an impression of the complexity of such an accelerator based light source The last chapter is devoted to the new hard X ray FELs which generate extremely intense radiation in the Angstrom regime The appendices contain supplementary material and more involved calculations
