Recent Advances in Metrology and Fundamental Constants T.J. Quinn, S. Leschiutta, 2001-12-18 The exchange between physics and metrology is always fascinating and exciting Many are the open problems in physics that call for extremely precise standards many are the advances in metrology made possible by a deep and assiduous study of the underlying physics One has just to think of the enormous sophistication required in the measurements of some absolute quantities such as the Avogadro the gas or the gravitational constants It is also worth noticing that not only the units of a metrological system are interrelated through the fundamental constants but also the latter find their full significance when they are determined through the most exacting metrological experiments Over the past decade many improvements took place and these are discussed in this book from one side the old caesium SI second definition has found a new realisation with the fountain approach replacing the classical thermal atomic beam The use of cold atom techniques in which bunches of inert atoms are collected slowed down and cooled has opened a number of new and unexpected avenues for metrology and fundamental constants one of these possibilities being the atom interferometry Another important quantum jump was the demonstration of the possibility of performing a direct frequency division in the visible using ultra short femtosecond pulses In addition the possibility of counting electrons or photons gave a fundamental support to the development of single electron capacitance standards and to new scenarios in the absolute calibration of photo detectors *Official Gazette of the United States Patent and Trademark Office*, 1995

hydrology the study of geotechnical hazards to high speed rail is very complex Monitoring and predicting such hazards on high speed railways is a significant challenge to their safe construction and operation Presents the latest technical achievement and development trends in landslide and rockfall forecasting Considers the challenges of high speed railways to the prediction and control of geotechnical hazards Gives both in situ and laboratory tests for rockfalls and considers the collapse process of rock slopes Describes the principles of slope monitoring with specific reference to high speed rail Details an automatic monitoring system for geotechnical hazards to high speed rail

Principles of Quantum General Relativity

Eduard Prugove?ki,1995 This monograph explains and analyzes the principles of a quantum geometric framework for the unification of general relativity and quantum theory By taking advantage of recent advances in areas like fibre and superfibre bundle theory Krein spaces gauge fields and groups coherent states etc these principles can be consistently incorporated into a framework that can justifiably be said to provide the foundations for a quantum extrapolation of general relativity This volume aims to present this approach in a way which places as much emphasis on fundamental physical ideas as on their precise mathematical implementation References are also made to the ideas of Einstein Bohr Born Dirac Heisenberg and others in order to set the work presented here in an appropriate historical context

Pragmatic Logic K. Ajdukiewicz, 2012-12-06 When asked in 1962 on what he was working Kazimierz Ajdukiewicz replied Several years ago Polish Scientific Publishers suggested that I prepare a new edition of The Logical Foundations of Teaching which I wrote before 1939 as a contribution to The Encyclopaedia of Education It was a small booklet covering elementary information about logical semantics and scientific methodology information which in my opinion was necessary as a foundation of teaching and as an element of the education of any teacher When I recently set to preparing the new edition I rewrote practically everything and a booklet of some 100 pages swelled into a bulky volume almost five times bigger The issues have remained practically the same but they are now analysed much more thoroughly and the threshold of difficulty is much higher now The main stress has been laid on the methods used in the empirical sciences and within that field on the theory of measurement and the methods of statistical inference I am now working on the last chapter of the book concerned with explanation procedures and theory construction in the empirical sciences When that book which I intend to entitle Pragmatic Logic is completed I intend to prepare for the press Vol 2 of my minor writings
