Molecular Basis of Neurological Disorders and Their Treatment J.W. Gorrod, A. Albano, E. Ferrari, S. Papa, 2012-12-06 cytochemical techniques ICC which provide a useful adjunct to investigations by immunoblotting A particular advantage of a cytochemical approach to the investigation of mitochondrial disorders is that it allows the mosaic distribution of certain of these defects to be detected whereas the tissue homogenization involved in conventional enzyme assays or immunoblotting precludes this A further advantage of MEA or ICC is that only small amounts of tissue are needed which is important since many of the affected patients are infants or small children The main aim of this communication is to outline ways in which these techniques can be used in the diagnosis and further investigation of mitochondrial disorders Reference will be made not only to those situations in which MEA and ICC offer advantages over standard enzyme assays and immunoblotting but also to contexts in which the reverse applies
