Gandhi, Anila D Malde, Amala G Kudalkar, Hemangi S Karnik, 2011-07 There is a large influx of trauma general surgical pediatric neurosurgical and obstetric emergencies as the hospital is one of the major public hospitals located in a densely populated region sitting amidst major routes in the city It also provides services for emergency cardiovascular cerebrovascular interventions and cadaver transplants Daily lessons from this tremendous emergency work inspired us to

bring out this book There is plethora of reference material available in basic sciences related to anesthesiology namely physiology pharmacology physics and anatomy Similarly a large number of textbooks are on techniques such as general regional monitored anesthesia care as well as super specialties like cardiac neurosurgical and pediatric anesthesia etc But there is a limited availability of books and references for emergency anesthesia One has to scan and integrate parts from various sources This book is an attempt to assimilate the scattered information and add clinical expertise Contents of this book have been divided into nine sections to cover majority of the emergencies General considerations for adults obstetric and pediatric sections have been written separately to avoid duplication An additional challenge is cases with various medical disorders for emergency surgeries Efforts have been taken to accommodate them in first section and obstetric section The contributors of this book work together at LTMMC and LTMGH and have a well balanced team with fresh talent bringing the latest technological knowledge and tenured practitioners supplementing it with applied experience Part of the team worked on collection of the matter from different sources for an ideal scenario while the senior faculty members used their vast clinical experience for a more practical and realistic application These combined efforts have been truly beneficial to achieve our goal to rationally mix latest technology with clinical experience and identify potential ways to conduct anesthesia with best results at least costs and minimum risk

Farquharson's Textbook of Operative General Surgery Brendan Moran,Rohin Mittal,Amy Lord,2025-11-26 The Eleventh Edition of Farquharson s continues to provide both the fundamental surgical skills needed by junior trainee surgeons and the general surgical subspecialty knowledge necessary for higher surgical training The topics cover the whole patient with the concept that trainee surgeons need an overview and all surgeons need to occasionally operate outside of their area of expertise Although surgeons in training no longer anticipate that they will be expected to undertake unfamiliar operations without supervision disease and injury do not respect specialty organ practice especially in emergency surgery and trauma With increasing specialisation even experienced surgeons can sometimes be involved in a surgical emergency or an intraoperative complication requiring them to perform an operative procedure in a subspecialty other than their own With this in mind each of the specialist authors have focused their topic on principles for the general surgeon and the editors have consolidated and adapted the information to bridge the gap between general and specialty surgery In many parts of the world General Surgery has remained an all encompassing surgical discipline and in remote hospitals General Surgeons may be the only surgical specialists When transfer and referral options are unavailable or delayed these surgeons may have to offer a limited service in orthopaedics neurosurgery urology and obstetrics For these reasons some operations in other surgical disciplines are included and here the emphasis is more on what might be achievable in difficult circumstances rather than on a more sophisticated procedure if this would be impractical outside a specialist centre This classic concise textbook will benefit all General Surgeons whether already well established or just embarking on their career in surgery
