Alexander, E. Masini, L. Mugnai, 2013-10-02 Responses to major disasters tend to be complex not merely because of the size and scale of operations and the number of countries and agencies involved but also because of the range of functions represented by these organizations A full scale emergency response can involve people trained in at least 35 different disciplines and professions This increasing sophistication of modern emergency response makes the process of coordination a particularly challenging one It involves matching urgent

needs with available resources in the most rapid and efficient way possible timely mobilization and quick action can reduce injury and loss of life as well as damage Emergency response management has been likened to conducting a symphony orchestra Only the conductor has the full score but the overall effect of many people playing different instruments can be wonderful if properly directed Professionalization of response and management is key This book Integrated Emergency Management for Mass Casualty Emergencies presents papers from experts in the field which explore the challenges of planning for and responding to mass casualty emergencies There are several chapters covering hospital procedure including field hospitals and hospital evacuation as well as natural and man made casualty events and the final chapter presents Auxilium a training simulation game There is a clear need to improve management and integration in emergency response This book will be of interest to all those whose work may involve them in preparing for and dealing with a disaster situation

**Handbook of Disaster and Emergency Management (Second Edition)** Amir Khorram-Manesh, Krzysztof Goniewicz, Attila Hertelendy, Maxim Dulebenets, 2021-10-06 Disasters and public health emergencies are increasing Climate change transportation incidents increasing numbers of mass gatherings chemical and technical incidents increasing number of armed conflicts and terrorism are some of the major reasons for this increasing pattern Any of these events may result in severe casualties destruction of infrastructures and create a situation in which the number of victims may exceed available resources Much of the knowledge in disaster medicine is based on the lessons learned However it has been proven that no lessons learned theoretically can be of practical use if the knowledge is not tested in an appropriate environment In this perspective the major clinical excellence and testing laboratories for disaster response are the scenes where disasters happen Yet most of the research and reports in the field are produced in high income countries while most of the disasters happen in middle or low income countries There is thus a need to bring these two environments together in order to translate theory into practice and among people who are highly exposed and involved in the multidisciplinary management of a disaster or major incident Medical Management of Neurosurgical Patients Rene Daniel, Catriona M.
