Emission Absorption And Transfer Of Radiation In Heated Atmospheres:

Emission, Absorption, and Transfer of Radiation in Heated Atmospheres Baxter H. Armstrong, Ralph W. Nicholls, 1972 **Advances in Geophysics**, 1979-01-15 Advances in Geophysics *Radiative Heat Exchange in the Atmosphere* K. Ya. Kondrat'Yev, 2013-09-03 Radiative Heat Exchange in the Atmosphere analyzes the concerns in thermal radiation and the radiation balance of the earth's surface and of the atmosphere. The text first covers the basic definitions and concepts and then proceeds to discussing the development of basic theories of actinometric measurements of thermal radiation fluxes. Next the selection deals with the absorption of long wave radiation in the atmosphere. In the fourth chapter the title covers the solution of the problem of radiative heat transfer in the atmosphere. Chapter 5 details the examination of the approximate methods of calculation of thermal radiation fluxes while Chapter 6 discusses the problem of the atmosphere and the net radiation at the ground. The seventh chapter tackles the radiation balance and the last chapter covers the features of the methods and the results of calculating temperature changes caused by radiation. The book will be of great use to researchers and practitioners of astrophysics and meteorology. Ecologists and other environmental scientists will also benefit from the text.

Chemistry of the Upper and Lower Atmosphere Barbara J. Finlayson-Pitts, James N. Pitts Jr., 1999-11-17 Here is the most comprehensive and up to date treatment of one of the hottest areas of chemical research. The treatment of fundamental kinetics and photochemistry will be highly useful to chemistry students and their instructors at the graduate level as well as postdoctoral fellows entering this new exciting and well funded field with a Ph D in a related discipline e.g. analytical organic or physical chemistry, chemical physics etc. Chemistry of the Upper and Lower Atmosphere provides postgraduate researchers and teachers with a uniquely detailed comprehensive and authoritative resource. The text bridges the gap between the fundamental chemistry of the earth's atmosphere and real world examples of its application to the development of sound scientific risk assessments and associated risk management control strategies for both tropospheric and stratospheric pollutants. Serves as a graduate textbook and must have reference for all atmospheric scientists. Provides more than 5000 references to the literature through the end of 1998. Presents tables of new actinic flux data for the troposphere and stratosphere 0-40km. Summarizes kinetic and photochemical data for the troposphere and stratosphere. Features problems at the end of most chapters to enhance the book's use in teaching. Includes applications of the OZIPR box model with comprehensive chemistry for student use. *Part 3.
