

is purported to have declared: "Qui se hasarderait à placer l'autorité de Copernic au-dessus de celle du Saint Esprit?" In fact, it is but an inaccurate rendering of Seidengart's second-hand source. With the same inaccuracy, it is declared repeatedly that the famous condemnation in 1277 by Bishop Tempier affirmed the possibility for God to create "an infinite plurality of worlds" (p. 155, but also 59, 337), whereas in reality Tempier affirmed only the possibility for God to create a plurality of worlds ("plures mundos"). This is no small difference for a book pretending to present the history of the emergence in Western thought of the infinite universe. The same lack of attention to critical literature is also evident in the extended presentation of Bruno's infinite cosmology. In this case, the interpretation goes hand-in-hand with a series of quotations in French from Bruno's Latin works, which often are not very accurate, the author preferring to rely excessively upon the Italian translation by Carlo Monti (cf. pp. 187, 201, 211, 239, 252).

Although this study does not supersede the old and briefer book by Koyré (indeed the author does not claim to do this), it treats many aspects of the main problem not attended to by its predecessor and can be seen as complementary. This is the case for seventeenth-century French authors and for Huygens as well as for Bruno. In this respect, Seidengart's study presents a richer and more variegated picture and has a certain utility. The reader should not forget, however, that many of his developments have already been presented by previous scholars who are not always cited, and that great caution has always to be applied in reading.

Empire of the Stars: Obsession, Friendship, and Betrayal in the Quest for Black Holes. Arthur I. Miller (Houghton Mifflin Company, Boston and New York, 2005). Pp. xx + 364. \$26. ISBN 0-618-34151-X.

Empire of the stars is an ambitious, wide-ranging, and significant undertaking. Its author, Arthur Miller, is a distinguished historian of science who, as the cover blurb indicates, "has written extensively on 19th and 20th century science and technology, cognitive science, scientific creativity, and the relationship between art and science". The book attempts to relate the history of the unravelling of the constitution of stellar objects, of the way energy is produced in them, and the history of trying to make sense of their evolution, i.e. of their life history: their genesis and ultimate fate. It does so by focusing on particular individuals, particular settings, and particular events that were deeply influential in determining the path taken by that history. For the first part of Miller's narrative Arthur Stanley Eddington, Ralph Fowler, Subrahmanyan Chandrasekhar ("Chandra") and Edward Arthur Milne are the principal characters, Cambridge University the site of the activities, and a famous encounter on Friday

Empire of the Stars Arthur I. Miller, 2005 A history of the idea of black holes explores the tumultuous debate over the existence of this now well accepted phenomenon focusing particular attention on Indian scientist Subrahmanyan Chandrasekhar Sirius Jay B. Holberg, 2007-02-22 This book tells two stories The first and most obvious is why the star known as Sirius has been regarded as an important fixture of the night sky by many civilizations and cultures since the beginnings of history A second but related narrative is the prominent part that Sirius has played in how we came to achieve our current scientific understanding of the nature and fate of the stars This is the first book to integrate the cultural history of Sirius with modern astrophysics in a way which provides a realistic view of how science progresses over time
