*Empirical Methods for Exploiting Parallel Texts* I. Dan Melamed, 2001 This book lays out the theory and the practical techniques for discovering and applying translational equivalence at the lexical level Parallel texts bitexts are a goldmine of linguistic knowledge because the translation of a text into another language can be viewed as a detailed annotation of what that text means Knowledge about translational equivalence which can be gleaned from bitexts is of central importance for applications such as manual and machine translation cross language information retrieval and corpus linguistics The availability of bitexts has increased dramatically since the advent of the Web making their study an exciting new area of research in natural language processing This book lays out the theory and the practical techniques for discovering and applying translational equivalence at the lexical level It is a start to finish guide to designing and evaluating many translingual applications

Parallel Text Processing Jean Véronis, 2013-03-14 | This book evolved from the ARCADE evaluation exercise that started in 1995 The project's goal is to evaluate alignment systems for parallel texts i.e. texts accompanied by their translation Thirteen teams from various places around the world have participated so far and for the first time some ten to fifteen years after the first alignment techniques were designed the community has been able to get a clear picture of the behaviour of alignment systems Several chapters in this book describe the details of competing systems and the last chapter is devoted to the description of the evaluation protocol and results The remaining chapters were especially commissioned from researchers who have been major figures in the field in recent years in an attempt to address a wide range of topics that describe the state of the art in parallel text processing and use As I recalled in the introduction the Rosetta stone won eternal fame as the prototype of parallel texts but such texts are probably almost as old as the invention of writing Nowadays parallel texts are electronic and they are becoming an increasingly important resource for building the natural language processing tools needed in the multilingual information society that is currently emerging at an incredible speed Applications are numerous and they are expanding every day multilingual lexicography and terminology machine and human translation cross language information retrieval language learning etc

Concluding Remarks      *Semantic Domains in Computational Linguistics* Alfio Gliozzo, Carlo Strapparava, 2009-07-31

Semantic fields are lexically coherent the words they contain co occur in texts In this book the authors introduce and define semantic domains a computational model for lexical semantics inspired by the theory of semantic fields Semantic domains allow us to exploit domain features for texts terms and concepts and they can significantly boost the performance of natural language processing systems Semantic domains can be derived from existing lexical resources or can be acquired from corpora in an unsupervised manner They also have the property of interlinguality and they can be used to relate terms in different languages in multilingual application scenarios The authors give a comprehensive explanation of the computational model with detailed chapters on semantic domains domain models and applications of the technique in text categorization word sense disambiguation and cross language text categorization This book is suitable for researchers and graduate students in computational linguistics      Advances in Information Retrieval Mohand Boughanem, Catherine Berrut, Josiane Mothe, Chantal Soule-Dupuy, 2009-03-27 This book constitutes the refereed proceedings of the 30th annual European Conference on Information Retrieval Research ECIR 2009 held in Toulouse France in April 2009 The 42 revised full papers and 18 revised short papers presented together with the abstracts of 3 invited lectures and 25 poster papers were carefully reviewed and selected from 188 submissions The papers are organized in topical sections on retrieval model collaborative IR filtering learning multimedia metadata expert search advertising evaluation opinion detection web IR representation clustering categorization as well as distributed IR      **Recent Advances in Example-Based Machine Translation** M.

Carl, Andy Way, 2012-12-06 Recent Advances in Example Based Machine Translation is of relevance to researchers and program developers in the field of Machine Translation and especially Example Based Machine Translation bilingual text processing and cross linguistic information retrieval It is also of interest to translation technologists and localisation professionals Recent Advances in Example Based Machine Translation fills a void because it is the first book to tackle the issue of EBMT in depth It gives a state of the art overview of EBMT techniques and provides a coherent structure in which all aspects of EBMT are embedded Its contributions are written by long standing researchers in the field of MT in general and EBMT in particular This book can be used in graduate level courses in machine translation and statistical NLP      **Machine Translation: From Research to Real Users** Stephen D. Richardson, 2003-06-30 AMTA 2002 From Research to Real Users Ever since the showdown between Empiricists and Rationalists a decade ago at TMI 92 MT researchers have hotly pursued promising paradigms for MT including data driven approaches e g statistical example based and hybrids that integrate these with more traditional rule based components During the same period commercial MT systems with standard transfer architectures have evolved along a parallel and almost unrelated track increasing their coverage primarily through manual update of their lexicons we assume and achieving much broader acceptance and usage principally through the medium of the Internet

Webpage translators have become commonplace a number of online translation services have appeared including in their offerings both raw and postedited MT and large corporations have been turning increasingly to MT to address the exigencies of global communication Still the output of the transfer based systems employed in this expansion represents but a small drop in the ever growing translation marketplace bucket

*A Chronology of Translation in China and the West* Sin-wai Chan,2009 This book is a study of the major events and publications in the world of translation in China and the West from its beginning in the legendary period to 2004 with special references to works published in Chinese and English It covers a total of 72 countries places and 1 000 works All the events and activities in the field have been grouped into 22 areas or categories for easy referencing This book is a valuable reference tool for all scholars working in the field of translation

**Envisioning Machine Translation in the Information Future** John S. White,2003-07-31 Envisioning Machine Translation in the Information Future When the organizing committee of AMTA 2000 began planning it was in that brief moment in history when we were absorbed in contemplation of the passing of the century and the millennium Nearly everyone was comparing lists of the most important accomplishments and people of the last 10 100 or 1000 years imagining the radical changes likely over just the next few years and at least mildly anxious about the potential Y2K apocalypse The millennial theme for the conference Envisioning MT in the Information Future arose from this period The year 2000 has now come and nothing terrible has happened yet to our electronic infrastructure Our musings about great people and events probably did not ennoble us much and whatever sense of jubilee we held has since dissipated So it may seem a bit obsolete or anachronistic to cast this AMTA conference into visionary themes

**Language Engineering for Lesser-studied Languages** Sergei Nirenburg,2009 Technologies enabling computers to process specific languages facilitate economic and political progress of societies where these languages are spoken Development of methods and systems for language processing is therefore a worthy goal for national governments as well as for business entities and scientific and educational institutions in every country in the world As work on systems and resources for the lower density languages becomes more widespread an important question is how to leverage the results and experience accumulated by the field of computational linguistics for the major languages in the development of resources and systems for lower density languages This issue has been at the core of the NATO Advanced Studies Institute on language technologies for middle and low density languages held in Georgia in October 2007 This publication is a collection of publication oriented versions of the lectures presented there and is a useful source of knowledge about many core facets of modern computational linguistic work By the same token it can serve as a reference source for people interested in learning about strategies that are best suited for developing computational linguistic capabilities for lesser studied languages either from scratch or using components developed for other languages The book should also be quite useful in teaching practical system and resource building topics in computational linguistics
