**Increasing and sustaining the productivity of fish and rice in the flood-prone ecosystems in south and southeast Asia (Tag 350)** The WorldFish Center, IFAD, **The Great Flood Of 1993** Stanley Changnon, 2019-07-11 The flood that affected a third of the United States during the summer of 1993 was the nation's worst ranking as a once in 300 years event. It severely tested national state and local systems for managing natural resources and for handling emergencies illuminating both the strengths and weaknesses in existing methods of preparing for and dealing with massive prolonged flooding. Through detailed case studies this volume diagnoses the social and economic impacts of the disaster assessing how resource managers, flood forecasters, public institutions, the private sector and millions of volunteers responded to it. The first comprehensive evaluation of the 1993 flood, this book examines the way in which floods are forecast and monitored, the effectiveness of existing recovery processes and how the nation manages its floodplains. The volume concludes with recommendations for the future in hope of better preparing the country for the next flood or other comparable disaster.

**Integrated Irrigation and Aquaculture in West Africa** Food and Agriculture Organization of the United Nations, 2006-01-01 This publication contains background documents and papers presented at a workshop on integrated irrigation/aquaculture (IIA) held in Mali in November 2003 as well as the findings of FAO expert missions on IIA in the West Africa region. The rationale for IIA development lies in its potential to increase productivity of scarce freshwater resources and to reduce pressure on natural resources issues of particular importance in the drought-prone countries of West Africa.

**Selected Water Resources Abstracts**, 1990 **Only Sword Immortal** Shen DiaoFeiYang, 2020-05-04 The only exception was the Immortal Hero Sword, the king of weapons. Immortal enlightenment was a matter of life and death and was eternal. Sword Immortal Heaven's Sword and Grounds **Alternatives in Regulated River Management** James A.

Gore, 2018-01-18 Researchers and managers of regulated river systems will find this volume useful in acquiring information for deciding an integrated management plan for regulated river operations. Rather than the ecological theory of impacts of flow regulation, emphasis has been placed on methods to predict water quality and habitat alterations as well as techniques to mitigate impacts from various operational scenarios. Although most chapters refer to impacts of riverine impoundments, these alternatives apply to any regulated situation in which changes in water quality or flow pattern occur. The predictive modeling techniques are explained primarily from a theoretical background. However, extensive bibliographies can guide the uninitiated to specific texts and software. Where controversial techniques have been presented, alternate methods are also described. Major topic areas include water quality problems, channel modification and management, ecological modeling and management as well as a section on perspectives for ecological management and special problems in developing nations.

**Thirsty Planet** Constance Elizabeth Hunt, 2013-07-18 By the year 2025, nearly 2 billion people will live in regions experiencing absolute water scarcity. In the face of this emerging crisis, how should the planet's water be used and managed?

Current international policy sees nature competing with human uses of water Hunt takes issue with this perspective She suggests that nature is the source of water and only by making the conservation of nature an absolute priority will we have the water we need for human use in future It is essential therefore to manage water in ways that maintain the water cycle and the ecosystems that support it This book looks at the complexity of the problem It provides a wide array of ideas information case studies and ecological knowledge often from remote corners of the developing world that could provide an alternative vision for water use and management at this critical time Essential and compelling reading for students on courses related to water resource management and development water managers and decision makers and non specialists with an interest in global water issues
