Flows on Homogeneous Spaces Louis Auslander, F. Hahn, L. Green, 1963-05-21 The description for this book Flows on Homogeneous Spaces AM 53 Volume 53 will be forthcoming **Flows on Homogeneous Spaces** Louis Auslander, F. Hahn, L. Green, 2016-03-02 A classic treatment of flows on homogeneous spaces from the acclaimed Annals of Mathematics Studies series Princeton University Press is proud to have published the Annals of Mathematics Studies since 1940 One of the oldest and most respected series in science publishing it has included many of the most important and influential mathematical works of the twentieth century The series continues this tradition as Princeton University Press publishes the major works of the twenty first century To mark the continued success of the series all books are available in paperback and as ebooks *Methods Of Qualitative Theory In Nonlinear Dynamics (Part Ii)* Leon O Chua, Leonid P Shilnikov, Andrey L Shilnikov, Dmitry V Turaev, 2001-09-27 Bifurcation and chaos has dominated research in nonlinear dynamics for over two decades and numerous introductory and advanced books have been published on this subject There remains however a dire need for a textbook which provides a pedagogically appealing yet rigorous mathematical bridge between these two disparate levels of exposition This book has been written to serve that unfulfilled need Following the footsteps of Poincaré and the renowned Andronov school of nonlinear oscillations this book focuses on the qualitative study of high dimensional nonlinear dynamical systems Many of the qualitative methods and tools presented in the book have been developed only recently and have not yet appeared in textbook form In keeping with the self contained nature of the book all the topics are developed with introductory background and complete mathematical rigor Generously illustrated and written at a high level of exposition this invaluable book will appeal to both the beginner and the advanced student of nonlinear dynamics interested in learning a rigorous mathematical foundation of this fascinating subject *Representation Theory and Complex Analysis* Michael Cowling, Edward Frenkel, Masaki Kashiwara, Alain Valette, David A. Vogan, Nolan R. Wallach, 2008-02-22 Six leading experts lecture on a wide spectrum of recent results on the subject of the title They present a survey of various interactions between representation theory and harmonic analysis on semisimple groups and symmetric spaces and recall the concept of amenability They further illustrate how representation theory is related to quantum computing and much more Taken together this volume provides both a solid reference and deep insights on current research activity *Complex Kleinian Groups* Angel Cano, Juan Pablo Navarrete, José Seade, 2012-11-05 This monograph lays down the foundations of the theory of complex Kleinian groups a newly born area of mathematics whose origin traces back to the work of Riemann Poincaré Picard and many others Kleinian groups are classically discrete groups of conformal automorphisms of the Riemann sphere and these can be regarded too as being groups of holomorphic automorphisms of the complex projective line \mathbb{CP}^1 When going into higher dimensions there is a dichotomy Should we look at conformal automorphisms of the n sphere or should we look at holomorphic automorphisms of higher dimensional complex projective spaces These two theories are different in higher

dimensions In the first case we are talking about groups of isometries of real hyperbolic spaces an area of mathematics with a long standing tradition In the second case we are talking about an area of mathematics that still is in its childhood and this is the focus of study in this monograph This brings together several important areas of mathematics as for instance classical Kleinian group actions complex hyperbolic geometry chrystallographic groups and the uniformization problem for complex manifolds

Meyers,2011-10-05

Mathematics of Complexity and Dynamical Systems is an authoritative reference to the basic tools and concepts of complexity systems theory and dynamical systems from the perspective of pure and applied mathematics Complex systems are systems that comprise many interacting parts with the ability to generate a new quality of collective behavior through self organization e g the spontaneous formation of temporal spatial or functional structures These systems are often characterized by extreme sensitivity to initial conditions as well as emergent behavior that are not readily predictable or even completely deterministic The more than 100 entries in this wide ranging single source work provide a comprehensive explication of the theory and applications of mathematical complexity covering ergodic theory fractals and multifractals dynamical systems perturbation theory solitons systems and control theory and related topics Mathematics of Complexity and

Dynamical Systems is an essential reference for all those interested in mathematical complexity from undergraduate and graduate students up through professional researchers Whitaker's Cumulative Book List ,1964 **Books in Series** ,1980 **Scripta Mathematica** Jekuthiel Ginsburg,1967 Includes section Book reviews *British Books* ,1963 *The Hybrid High-Order Method for Polytopal Meshes* Daniele Antonio Di Pietro,Jérôme Droniou,2020-04-03 This monograph provides an introduction to the design and analysis of Hybrid High Order methods for diffusive problems along with a panel of applications to advanced models in computational mechanics Hybrid High Order methods are new generation numerical methods for partial differential equations with features that set them apart from traditional ones These include the support of polytopal meshes including non star shaped elements and hanging nodes the possibility of having arbitrary approximation orders in any space dimension an enhanced compliance with the physics and a reduced computational cost thanks to compact stencil and static condensation The first part of the monograph lays the foundations of the method considering linear scalar second order models including scalar diffusion possibly heterogeneous and anisotropic and diffusion advection reaction The second part addresses applications to more complex models from the engineering sciences non linear Leray Lions problems elasticity and incompressible fluid flows This book is primarily intended for graduate students and researchers in applied mathematics and numerical analysis who will find here valuable analysis tools of general scope
