potential output a slide under way since 1969 The decline in growth rates has been especially pronounced in national income per person employed and other productivity measures as growth of total output has slowed despite a sharp acceleration in growth of employment and total hours at work Denison organizes his discussion around eight tables that divide 1929-82 into three long periods the last 1973-82 and seven shorter periods the most recent 1973-79 and 1979-82 These tables provide estimates of the sources of growth for eight output measures in each period Denison stresses that the 1973-82 period of slow growth is unfinished He observes no improvement in the productivity trend only a weak cyclical recovery from a 1982 low Sources of growth tables isolate the contributions made to growth between input and output per unit of input Even so it is not possible to quantify separately the contribution of all determinants and Denison evaluates qualitatively the effects of other developments on the productivity slowdown
