Fluctuations Instabilities And Phase Transitions:

Fluctuations, Instabilities, and Phase Transitions T. Riste, 2012-11-25 This book contains the papers presented at the NATO Advanced Study Institute held at Geilo Norway 11th 20th April 1975 The institute was the third in a row devoted to phase transitions The previous two dealt with 2nd and 1st order transitions in equilibrium systems and the proceedings have been published i In order to make an overlap with those institutes the first part of this institute was devoted to 1st order transitions with an emphasis on the problems of metastability and instability encountered in spinodal decomposition nucleation etc The main topic was however that of non equilibrium systems and the present institute was to our knowledge the first one devoted to the physics of such systems The discovery of the analogy between phase transitions in equilibrium systems and instabilities in non equilibrium systems was first made by Rolf Landauer in 1961 and later independently by others The analogy was first pointed out for electronic devices tunnel diodes Gunn oscillators lasers etc and the treatment of hydrodynamic instabilities followed later

FLUCTUATIONS, INSTABILITIES AND PHASE TRANSITIONS- PROCEEDINGS OF A NATO ADVANCED STUDY INSTITUTE. ,

Nonlinear Phenomena at Phase Transitions and Instabilities Tormod Riste, 2012-12-06 This NATO Advanced Study Institute held in Geilo between March 29th and April 9th 1981 was the sixth in a series devoted to the subject of phase transitions and instabilities The present institute was intended to provide a forum for discussion of the importance of nonlinear phenomena associated with instabilities in systems as seemingly disparate as ferroelectrics and rotating buckets of oil Ten years ago at the first Geilo school the report of a central peak in the fluctuation spectrum of SrTiO close to its 3 106 K structural phase transition demonstrated that the simple soft mode theory of such transitions was incomplete The missing ingredient was the essential nonlinearity of the system Participants at this year's Geilo school heard assessments of a decade of experimental and theoretical effort which has been expended to elucidate the nature of this

nonlinearity The importance of ordered clusters and the walls which bound them was stressed in this context A specific type of wall the soliton was discussed by a number of speakers New experimental results which purport to demonstrate the existence of solitons in a one dimensional ferromagnet were presented A detailed discussion was given of the role of solitons in transport phenomena in driven multistable systems typified by a sine Gordon chain

Phase Transitions in Soft Condensed Matter Tormod Riste, David Sherrington, 2012-12-06 This volume comprises the proceedings of a NATO Advanced Study Institute held in Geilo Norway between 4-14 April 1989 This Institute was the tenth in a series held at Geilo on the subject of phase transitions It was the first to be concerned with the growing area of soft condensed matter which is neither ordinary solids nor ordinary liquids but somewhere in between The Institute brought together many lecturers students and active researchers in the field from a wide range of NATO and some non NATO countries with financial support principally from the NATO Scientific Affairs Division but also from Institutt for energiteknikk the Norwegian Research Council for Science and the Humanities NAVF The Nordic Institute for Theoretical Atomic Physics NORDITA the Norwegian Physical Society and VISTA a research cooperation between the Norwegian Academy of Science and Letters and Den norske stats oljeselskap a.s. STATOIL The organizing committee would like to thank all these contributors for their help in promoting an exciting and rewarding meeting and in doing so are confident that they echo the appreciation also of all the participants Soft condensed matter is characterized by weak interactions between polyatomic constituents by important thermal fluctuations effects by mechanical softness and by a rich range of behaviours The main emphasis at this Institute was on the fundamental collective physics but preparation techniques and industrial applications were also considered

Noise-Induced Transitions W. Horsthemke, R. Lefever, 2006-09-12 The study of phase transitions is among the most fascinating fields in physics Originally limited to transition phenomena in equilibrium systems this field has outgrown its classical confines during the last two decades The behavior of far from equilibrium systems has received more and more attention and has been an extremely active and productive subject of research for physicists chemists and biologists Their studies have brought about a more unified vision of the laws which govern self organization processes of physico chemical and biological systems A major achievement has been the extension of the notion of phase transition to instabilities which occur only in open nonlinear systems The notion of phase transition has been proven fruitful in application to nonequilibrium instabilities known for about eight decades like certain hydrodynamic instabilities as well as in the case of the more recently discovered instabilities in quantum optical systems such as the laser in chemical systems such as the Belousov Zhabotinskii reaction and in biological systems Even outside the realm of natural sciences this notion is now used in economics and sociology In this monograph we show that the notion of phase transition can be extended even further It applies also to a new class of transition phenomena which occur only in nonequilibrium systems subjected to a randomly

The Early Universe and the Cosmic Microwave Background: Theory and Observations Norma G. Sánchez, Yuri N. Parijskij, 2012-12-06 The goal of the Daniel Chalonge School on Astrofundamental Physics is to contribute to a theory of the universe and particularly of the early universe up to the marks and at the scientific height of the unprecedented accuracy existent and expected in the observational data The impressive development of modern cosmology during the last decades is to a large extent due to its unification with elementary particle physics and quantum field theory The cross section between these fields has been increasing setting up Astrofundamental Physics The early universe is an exceptional theoretical and experimental laboratory in this new discipline This NATO Advanced Study Institute provided an up dated understanding from a fundamental physics and deep point of view of the progress and key issues in the early universe and the cosmic microwave background theory and observations The genuine interplay with large scale structure formation and dark matter problem were discussed The central focus was placed on the cosmic microwave background Emphasis was given to the precise inter relation between fundamental physics and cosmology in these problems both at the theoretical and experimental observational levels within a deep and well defined programme which provided in addition a careful interdisciplinarity Special sessions were devoted to high energy cosmic rays neutrinos in astrophysics and high energy astrophysics Deep understanding clarification synthesis careful interdisciplinarity within a fundamental physics framework were the main goals of the course
