Toker, 2007-12-18 *Fallingwater Rising* is a biography not of a person but of the most famous house of the twentieth century Scholars and the public have long extolled the house that Frank Lloyd Wright perched over a Pennsylvania waterfall in 1937 but the full story has never been told When he got the commission to design the house Wright was nearing seventy his youth and his early fame long gone It was the Depression and Wright had no work in sight Into his orbit stepped Edgar J Kaufmann a Pittsburgh department store mogul the smartest retailer in America and a philanthropist with the burning ambition to build a world famous work of architecture It was an unlikely collaboration the Jewish merchant who had little concern for modern architecture and the brilliant modernist who was leery of Jews But the two men collaborated to produce an extraordinary building of lasting architectural significance that brought international fame to them both and confirmed Wright's position as the greatest architect of the twentieth century *Fallingwater Rising* is also an enthralling family drama involving Kaufmann his beautiful cousin wife Liliane and their son Edgar Jr whose own role in the creation of *Fallingwater* and its ongoing reputation is central to the story Involving such key figures of the 1930s as Frida Kahlo Albert Einstein Henry R Luce William Randolph Hearst Ayn Rand and Franklin Roosevelt *Fallingwater Rising* shows us how E J Kaufmann's house became not just Wright's masterpiece but a fundamental icon of American life One of the pleasures of the book is its rich evocation of the upper crust society of Pittsburgh Carnegie Frick the Mellons a society that was socially reactionary but luxury loving and baronial in its tastes hobbies and sexual attitudes Kaufmann had so many mistresses that his store issued them distinctive charge plates they could use without paying Franklin Toker has been studying *Fallingwater* for eighteen years No one but he could have given us this compelling saga of the most famous private house in the world and the dramatic personal story of the fascinating people who made and used it A major contribution to both architectural and social history *Frank Lloyd Wright's Fallingwater* Catherine W Zipf, 2020-12-30 New Deal Book Award 2022 Honourable Mention *Frank Lloyd Wright's Fallingwater* explores the relationship between the economic tumult in the United States in the 1930s Frank Lloyd Wright and the construction of his most famous house *Fallingwater* The book reinterprets the history of this iconic building recognizing it as a Depression era monument that stands as a testimony to what an American architect could achieve with the right site client and circumstance even in desperate economic circumstances Using newly available resources author Catherine W Zipf examines Wright's work before and after *Fallingwater* to show how it was influenced by the economic climate public architectural projects of the Great Depression and America's changing relationship with Modernist style and technology Including over 50 black and white images this book will be of great interest to students historians and researchers of art architecture and Frank Lloyd Wright *Frank Lloyd Wright's Fallingwater*, 2010 **Fallingwater** Lynda

The Exact Sciences in Antiquity Otto Neugebauer, 1969-01-01 Based on a series of lectures delivered at Cornell University in the fall of 1949 and since revised this is the standard non technical coverage of Egyptian and Babylonian mathematics and astronomy and their transmission to the Hellenistic world Entirely modern in its data and conclusions it reveals the surprising sophistication of certain areas of early science particularly Babylonian mathematics After a discussion of the number systems used in the ancient Near East contrasting the Egyptian method of additive computations with unit fractions and Babylonian place values Dr Neugebauer covers Babylonian tables for numerical computation approximations of the square root of 2 with implications that the Pythagorean Theorem was known more than a thousand years before Pythagoras Pythagorean numbers quadratic equations with two unknowns special cases of logarithms and various other algebraic and geometric cases Babylonian strength in algebraic and numerical work reveals a level of mathematical development in many aspects comparable to the mathematics of the early Renaissance in Europe This is in contrast to the relatively primitive Egyptian mathematics In the realm of astronomy too Dr Neugebauer describes an unexpected sophistication which is interpreted less as the result of millennia of observations as used to be the interpretation than as a competent mathematical apparatus The transmission of this early science and its further development in Hellenistic times is also described An Appendix discusses certain aspects of Greek astronomy and the indebtedness of the Copernican system to Ptolemaic and Islamic methods Dr Neugebauer has long enjoyed an international reputation as one of the foremost workers in the area of premodern science Many of his discoveries

have revolutionized earlier understandings In this volume he presents a non technical survey with much material unique on this level which can be read with great profit by all interested in the history of science or history of culture 14 plates 52 figures
