Role of Interfaces in Environmental Protection Sandor Barany, 2012-12-06 The NATO Advanced Research Workshop Role of Interfaces in Environmental Protection has been held on May 27 30 2002 in Miskolc Hungary under leadership of co directors Prof Sandor Barany from the University of Miskolc Hungary and Prof Nataliya Klymenko National Academy of Sciences of Ukraine The objective of the ARW was to highlight colloidal and biocolloidal aspects of environmental pollution and technologies to monitor remediate abate and prevent pollution It is known that the solution of majority of environmental problems is closely connected with phenomena at the interfaces The behaviour transport of dispersed particles in the environment the main phase separation methods in water treatment purification of liquids aerosols removal many soil remediation processes as well as the methods of protection of human organisms from hazardous matters are based on concepts of colloid chemistry i e properties of interfaces and their behaviour in different

media Examples of these methods are filtration ultrafiltration flotation coagulation hetero coagulation and flocculation adsorption adhesion of micro organisms to surfaces membrane separation methods etc A very important and special aspect of the topic is the human protection using colloid chemical approaches i e the adsorption aggregation and adagulation properties of differe t materials Examples are adsorption of hazardous organic materials drugs heavy metals and radionuclides on activated carbon silica cellulose derivatives etc Gold Catalysis Laura Prati,Alberto Villa,2016-01-05 Since the first report on alcohol oxidation in 1998 many studies have highlighted some peculiarity of gold with respect to other metals Some analogies have been found between gas and liquid phases but the big challenge to operate in a condensed phase lies in the role of the solvent in tuning the reactant catalyst contact Liquid phase oxidation **Inorganic Reactions and Methods, The Formation of Bonds to Transition and Inner-Transition Metals** A. Garnovskii, Boris I. Kharisov, 2003-04-25 This reference offers a clear and concise review of modern synthetic techniques of metal complexes as well as lesser known gas and solid phase synthesis electrosynthesis and microwave and ultrasonic treatment of the reaction system **Direct Synthesis of Coordination and Organometallic Compounds** A.D. Garnovskii, B.I. Kharisov, 1999-08-13 This book is devoted to the interaction between elemental metals and inorganic ligands in different reaction conditions Metals could be activated for further reactions as cryosynthesis electrosynthesis and tribosynthesis some of them with or without ultrasonic and microwave treatment The kinetics of metal dissolution in various non aqueous media is discussed in detail Many methods are used nowadays to synthesize coordination compounds Metal complexes are obtained mainly by the direct interaction of the components the ligands and a source of the complex forming metal as a result of ligand and metal exchange and under the conditions of template synthesis which also include the method of nascent reagents In these methods the source of the metal is either its salts or carbonyls At the same time it has long been known that coordination compounds may be obtained as a result of direct synthesis from zero valent metals Methods for the synthesis of complex compounds under the conditions of gas phase reactions oxidative dissolution of zero valent metals in non aqueous media and in the solid phase have been developed These methods have become the basis of a new field in synthetic chemistry the direct synthesis of coordination and organometallic

compounds from zero valent metals Particular aspects of the above problem have been described in a series of reviews and monographs However on the whole these main parts of the direct synthesis of metal complexes has not been dealt with in the review and monograph publications on coordination chemistry So the main objective of this book is to analyze discuss and generalize the existing information in the area of direct reactions leading to the coordination and organometallic reactions Some methods of direct synthesis have been developed in the former USSR in particular a lot of works on cryosynthesis pioneered 1972 1973 and recent works on electrosynthesis but in spite of their novelty and or wide applicability they are practically unknown elsewhere due to the language barrier Thus another objective of this book is to acquaint the readers with the mentioned achievements Every chapter contains the tables which describe all the reported data on direct reaction between metal atoms metal particles or bulk metals with in organic ligands There are some illustrations also for example the scheme of the reactor for gas phase reaction between metal small particles and diketones
