National Advisory Committee for Aeronautics, 1951      A Method for Measuring the Product of Inertia and the Inclination of the Principal Longitudinal Axis of Inertia of an Airplane Robert W. Boucher, 1954 The angle of inclination of the principal axis was found to have probable error of plus or minus 0 17 degrees both from analysis of the error of inertia measurement of the full scale airplane and from tests with a model having a simple configuration Analysis showed the probable error of the inertia measurements for the test airplane to be plus or minus 1 00 plus or minus 0 49 and plus or minus 0 35 percent of the true moment of inertia about the X Y and Z body reference axes respectively      Ground Vortex Workshop Richard J. Margason, 1988      **NASA Technical Note**, 1977      An Experimental Investigation of the Flow Structure of the Turbulent Boundary Layer Peter W. Runstadler, Stephen Jay Kline, William C. Reynolds, 1963 A combination of visual and quantitative measurements is presented providing a physical picture of the turbulent boundary layer flow structure on a flat plate The flow structure is shown to consist of three zones each zone has a one to one correspondence to the well known regions of the u y mean velocity profile A wall layer region is shown to exist below y 10 An apparently fully turbulent region exists corresponding to the logarithmic law of the wall and the buffer region An intermittent zone appears to agree closely with the wake deviation region An entirely new result of the investigation is the delineation of the structure of the wall layer region This region is shown to contain a relatively regular structure of low and high velocity fluid streaks alternating in the span direction together with the ejection of low momentum fluid into the outer flow Correlations are given for the rate of ejection and the streak spacing A qualitative description of other features of the wall layer region and the character of the remainder of the boundary layer flow structure is presented Author      **NASA Technical Paper**, 1984

**Introduction to Convective Heat Transfer** Nevzat Onur, 2023-04-04 INTRODUCTION TO CONVECTIVE HEAT TRANSFER A highly practical intro to solving real world convective heat transfer problems with MATLAB and MAPLE In Introduction to Convective Heat Transfer accomplished professor and mechanical engineer Nevzat Onur delivers an insightful exploration of the physical mechanisms of convective heat transfer and an accessible treatment of how to build mathematical models of these physical processes Providing a new perspective on convective heat transfer the book is comprised of twelve chapters all of which contain numerous practical examples The book emphasizes foundational concepts and is integrated with explanations of computational programs like MATLAB and MAPLE to offer students a practical outlet for the concepts discussed within The focus throughout is on practical physical analysis rather than mathematical detail

which helps students learn to use the provided computational tools quickly and accurately In addition to a solutions manual for instructors and the aforementioned MAPLE and MATLAB files Introduction to Convective Heat Transfer includes A thorough introduction to the foundations of convective heat transfer including coordinate systems and continuum and thermodynamic equilibrium concepts Practical explorations of the fundamental equations of laminar convective heat transfer including integral formulation and differential formulation Comprehensive discussions of the equations of incompressible external laminar boundary layers including laminar flow forced convection and the thermal boundary layer concept In depth examinations of dimensional analysis including the dimensions of physical quantities dimensional homogeneity and dimensionless numbers Ideal for first year graduates in mechanical aerospace and chemical engineering Introduction to Convective Heat Transfer is also an indispensable resource for practicing engineers in academia and industry in the mechanical aerospace and chemical engineering fields Tabulation of Mass-flow Parameters for Use in Design of Turbomachine Blade Rows for Ratios of Specific Heats of 1.3 and 1.4 Warren J. Whitney, 1956 Mass flow tables for ratios of specific heats of 1.3 and 1.4 are presented for the entire range of critical velocity ratio The tables enable a quick and accurate determination of the integrated average specific mass flow across a region where the end point velocities are known commensurate with the assumptions that the total state is constant and the static pressure varies linearly between the two velocities A numerical example is included to illustrate the use of the tables All quantities are in nondimensional form and are tabulated against critical velocity ratio The tables include specific mass flow parameter and ratio of static to total pressure
