Free Will A Very Short Introduction:

Free Will Thomas Pink, 2004-06-24 Every day we seem to make and act upon all kinds of free choices some of them trivial and some so consequential that they may change the course of our life or even the course of history But are these choices really free Or are we compelled to act the way we do by factors beyond our control Is the feeling that we could have made different decisions just an illusion And if our choices are not free why should we be held morally responsible for our actions This Very Short Introduction written by a leading authority on the subject looks at a range of issues surrounding this fundamental philosophical question exploring it from the ideas of the Greek and medieval philosophers through to the thoughts of present day thinkers It provides a interesting and incisive introduction to this perennially fascinating subject ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Companions to Philosophy series A Companion to Free Will is essential reading for undergraduate and graduate students of philosophy professional philosophers and theorists and interested novices alike **Philosophy: A Very Short Introduction** Edward Craig, 2020-09-24 How ought we to live What really exists How do we know This Very Short Introduction discusses some of the key questions philosophy engages with Edward Craig explores important themes in ethics and the nature of knowledge and the self through readings from Plato Hume Descartes Hegel Darwin and Buddhist writers Throughout he emphasizes why we do philosophy explains how different areas of philosophy are related and explores the contexts in which philosophy was and is done This new edition includes a new chapter on free will discussing determinism and indeterminism in the context of Descartes and Hegel's work Craig also covers the Problem of Evil and Kant's argument on the source of moral obligation ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable **Free Will** Mark Balaguer, 2014-02-14 A philosopher considers whether the scientific and philosophical arguments against free will are reason enough to give up our belief in it In our daily life it really seems as though we have free will that what we do from moment to moment is determined by conscious decisions that we freely make You get up from the couch you go for a walk you eat chocolate ice cream It seems that we're in control of actions like these if we are then we have free will But in recent years some have argued that free will is an illusion The neuroscientist and best selling author Sam Harris and the late Harvard psychologist Daniel Wegner for example claim that certain scientific findings disprove free will In this engaging and accessible volume in the Essential Knowledge series the philosopher Mark Balaguer examines the various arguments and experiments that have been cited to support the claim that human beings don't have free will He finds them to be overstated and misguided Balaguer discusses determinism the view that every physical event is predetermined or completely caused by prior events He describes several philosophical and scientific arguments against free will including one based on Benjamin Libet's famous neuroscientific experiments which allegedly show that our conscious decisions are caused by neural events that occur before we choose He considers various religious and philosophical views including the philosophical pro free will view known as compatibilism Balaguer concludes that the anti free will arguments put forward by philosophers psychologists and neuroscientists simply don't work They don't provide any good reason to doubt the existence of free will But he cautions this doesn't necessarily mean that we have free will The question of whether we have free will remains an open one we simply don't know enough about the brain to answer it definitively **Free Will: Oxford Bibliographies Online Research Guide** Oxford University Press, 2010-06-01 This ebook is a selective guide designed to help scholars and students of social work find reliable sources of information by directing them to the best available scholarly materials in whatever form or format they appear from books chapters and journal articles to online archives electronic data

Free Will Nicholaus Rescher, 2013-05-02 Few philosophical issues have had as long and elaborate a history as the problem of free will which has been contested at every stage of the history of the subject The present work practices an extensive bibliography of this elaborate literature listing some five thousand items ranging from classical antiquity to the present The Obligation Dilemma Ishtiyaque Haji, 2019 There are no moral obligations either it is determined in advance what we will do or it is not But any action not in our control cannot be obligatory for us Hence regardless of whether our actions are determined to occur nothing is obligatory This conclusion has important implications for conceptions of moral responsibility and free will Experimental Philosophy Joshua Knobe, Shaun Nichols, 2008 This volume provides an introduction to the major themes of work in experimental philosophy bringing together some of the most influential articles in the field along with a collection of papers that explore the theoretical significance of this research *Quantum Information and Consciousness* Danko D. related to consciousness within the framework of modern theoretical physics in a comprehensible manner that elucidates the nature of the mind body relationship The reader also gains an overview of methods for constructing and testing quantum informational theories of consciousness

Self-Determination Thomas Pink,2016-12-01 Thomas Pink offers a new approach to the problem of free will Do we have control of how we act so that we are free to act in more than one way and does it matter to morality whether we do Pink argues that what matters to morality is not in fact the freedom to do otherwise but something more primitive a basic capacity or power to determine for ourselves what we do This capacity might or might not take the form of a freedom to act in more than one way and it might or might not be compatible with causal determinism What really matters to morality is that it is we who determine what we do What we do must not simply be a function of powers or capacities for which we are not responsible or a matter of mere chance At the heart of moral responsibility is a distinctive form of power that is quite unlike ordinary causation a power by which we determine outcomes in a way quite differently from the way ordinary causes determine outcomes Pink examines how this power is involved in action and how the nature of action permits the operation of such a power to determine it

Encyclopedia of the Mind Harold Pashler,2013-01-14 It s hard to conceive of a topic of more broad and personal interest than the study of the mind In addition to its traditional investigation by the disciplines of psychology psychiatry and neuroscience the mind has

also been a focus of study in the fields of philosophy economics anthropology linguistics computer science molecular biology education and literature In all these approaches there is an almost universal fascination with how the mind works and how it affects our lives and our behavior Studies of the mind and brain have crossed many exciting thresholds in recent years and the study of mind now represents a thoroughly cross disciplinary effort Researchers from a wide range of disciplines seek answers to such questions as What is mind How does it operate What is consciousness This encyclopedia brings together scholars from the entire range of mind related academic disciplines from across the arts and humanities social sciences life sciences and computer science and engineering to explore the multidimensional nature of the human mind **A**

Metaphysics for Freedom Helen Steward,2012-03-08 A Metaphysics for Freedom argues that agency itself and not merely the special distinctively human variety of it is incompatible with determinism For determinism is threatened just as surely by the existence of powers which can be unproblematically accorded to many sorts of animals as by the distinctively human powers on which the free will debate has tended to focus She suggests that a tendency to approach the question of free will solely through the issue of moral responsibility has obscured the fact that there is a quite different route to incompatibilism based on the idea that animal agents above a certain level of complexity possess a range of distinctive two way powers not found in simpler substances Determinism is not a doctrine of physics but of metaphysics and the idea that it is physics which will tell us whether our world is deterministic or not presupposes what must not be taken for granted that is that physics settles everything else and that we are already in a position to say that there could be no irreducibly top down forms of causal influence Steward considers questions concerning supervenience laws and levels of explanation and explores an outline of a variety of top down causation which might sustain the idea that an animal itself rather than merely events and states going on in its parts might be able to bring something about The resulting position permits certain important concessions to compatibilism to be made and a convincing response is also offered to the charge that even if it is agreed that determinism is incompatible with agency indeterminism can be of no possible help The whole is an argument for a distinctive and resolutely non dualistic naturalistically respectable version of libertarianism rooted in a conception of what biological forms of organisation might make possible in the way of freedom **Freedom, Teleology, and Evil** Stewart Goetz,2011-10-27

In Freedom Teleology and Evil Stewart Goetz defends the existence of libertarian freedom of the will He argues that choices are essentially uncaused events with teleological explanations in the form of reasons or purposes Because choices are uncaused events with teleological explanations whenever agents choose they are free to choose otherwise Given this freedom to choose otherwise agents are morally responsible for how they choose Thus Goetz advocates and defends the principle of alternative possibilities which states that agents are morally responsible for a choice only if they are free to choose otherwise Finally given that agents have libertarian freedom Goetz contends that this freedom is integral to the construction of a theodicy which explains why God allows evil **God and the Book of Nature** Mark Harris,2023-12-19 God and the Book of

Nature develops theological views of the natural sciences in light of the recent theological turn in science and religion scholarship and the science engaged theology movement Centered around the Book of Nature metaphor it brings together contributions by theologians natural scientists and philosophers based in Europe and North America They provide an exploration of complementary and even contesting readings of the Book of Nature particularly in light of the vexing questions that arise around essentialism and unity in the field of science and religion Taking an experimental and open ended approach the volume does not attempt to unify the readings into a single plot that defines the Book of Nature still less a single theology of nature but instead it represents a variety of hermeneutical stances Overall the book embraces a constructive theological attitude toward the modern sciences and makes significant contributions to the research literature in science and religion

The Book of Minds Philip Ball,2022-06-28 Popular science writer Philip Ball explores a range of sciences to map our answers to a huge philosophically rich question How do we even begin to think about minds that are not human Sciences from zoology to astrobiology computer science to neuroscience are seeking to understand minds in their own distinct disciplinary realms Taking a uniquely broad view of minds and where to find them including in plants aliens and God Philip Ball pulls the pieces together to explore what sorts of minds we might expect to find in the universe In so doing he offers for the first time a unified way of thinking about what minds are and what they can do by locating them in what he calls the space of possible minds By identifying and mapping out properties of mind without prioritizing the human Ball sheds new light on a host of fascinating questions What moral rights should we afford animals and can we understand their thoughts Should we worry that AI is going to take over society If there are intelligent aliens out there how could we communicate with them Should we Understanding the space of possible minds also reveals ways of making advances in understanding some of the most challenging questions in contemporary science What is thought What is consciousness And what if anything is free will Informed by conversations with leading researchers Ball s brilliant survey of current views about the nature and existence of minds is more mind expanding than we could imagine In this fascinating panorama of other minds we come to better know our own

How to Be Multiple Helena de Bres,2023-11-07 Philosopher Helena de Bres uses the curious experience of being a twin as a lens for reconsidering our place in the world with illustrations by her identical twin Julia Wait are you you or the other one Which is the evil twin Have you ever switched partners Can you read each other s mind Twins get asked the weirdest questions by strangers loved ones even themselves For Helena de Bres a twin and philosophy professor these questions are closely tied to some of philosophy s most unnerving unknowns What makes someone themselves rather than someone else Can one person be housed in two bodies What does perfect love look like Can we really act freely At what point does wonder morph into objectification Accompanied by her twin Julia s drawings Helena uses twinhood to rethink the limits of personhood consciousness love freedom and justice With her inimitably candid wry voice she explores the long tradition of twin representations in art myth and popular culture twins peculiar social standing and what it s really

like to be one of two With insight hope and humor she argues that our reactions to twins reveal our broader desires and fears about selfhood fate and human connection and that reflecting on twinhood can help each of us twins and singletons alike recognize our own multiplicity and approach life with greater curiosity imagination and courage Animal Choice and Human Freedom Michael Yudanin, 2020-09-02 In Animal Choice and Human Freedom On the Genealogy of Self Determined Action Michael Yudanin argues that describing freedom conceptually is impossible without explaining how it can exist in the world Yudanin develops an account of freedom's instantiation in biological agents and provides several prerequisites that are necessary for its exercise He demonstrates that freedom is linked to the form of life and distinguishes between choice in non verbal animals and human freedom where the latter is enabled by the development of language and thus possesses a distinct character Following this descriptive account Yudanin explores freedom's evolutionary history explaining how it developed in the course of the evolution of species
