Norwegian Life and Landscape Anthony Martin, 1952 **Rethinking International Skilled Migration** Micheline van Riemsdijk, Qingfang Wang, 2016-10-04 In today's global knowledge economy competition for the best and brightest workers has intensified. Highly skilled workers are an asset to companies, knowledge institutions, cities and regions as they contribute to knowledge creation, innovation and economic growth and development. Skilled migrants cross and many times straddle international borders to pursue professional opportunities. These spatial relocations provide opportunities and challenges for migrants and the cities and regions they inhabit. How have international skilled migratory flows been formed, sustained and transformed over multiple spaces and scales? How have these processes affected cities and regions? And how have multiple stakeholders responded to these processes? The contributors to this book bring together perspectives from economic, social, urban and population geography in order to address these questions from a myriad of angles. Empirical case studies from different regions illuminate the multiscaled processes of international skilled migration. In particular, the contributions rethink skilled migration theories and provide insights into the experiences of highly skilled labor migrants and international students, issues related to transnational activities and return migration and policy implications for both immigrant source and destination countries. It also charts a future research agenda for international skilled migration research. **Rethinking International Skilled Migration** provides a comparative perspective on the experiences of skilled migrants across the local, regional, national and/or global scale, paying particular attention to spatial and place-based dimensions of international skilled migration. It will be of interest to scholars and professionals in international migration, regional and national development, policymakers, international businesses and NGOs.

Poetry and Sustainability in Education Sandra Lee Kleppe, Angela Sorby, 2022-08-23 This edited collection offers educators at all levels a range of practical and theoretical approaches to teaching poetry in the context of environmental sustainability. The contributors are keenly aware of the urgency facing the planet's ecosystems, which include all of us, and this volume makes the case that teaching poetry is not a luxury. Each of the book's three sections works from a specific angle and register. Part I focuses on pragmatic approaches to classroom activities and curricular choices. Part II considers policies and politics, including the role of the UN's Education for Sustainable Development (ESD) program. Part III takes a widescreen view, exploring the philosophical issues that arise when poems are integrated into sustainability curricula. This book exemplifies how poetry empowers readers to

think imaginatively about how to sustain and why to sustain our world its resources and its beauty **The Studio** ,1953
