Having Fun Learning Basic A Workbook Approach:

Having Fun Learning Basic Richard G. Peddicord, George Converse, 1992 *Hinduism for Children Activity Workbook* Dinesh Verma, 2009-07-18 The Hinduism activity book provides a fun way to learn this great religion. It uses puzzles and activities to explain the fundamental concepts of Hinduism. The activity book has several sections, each building upon the previous one. The first section deals with the philosophy and common concepts in all branches of Hinduism, including the concepts of Purusharth, Atma, Brahman, and the different ways to attain moksha in different Hindu branches. The second section deals with Hindu gods and legends. The third section covers major Hindu festivals, and the final one has a brief introduction to Hindu time keeping, including the concept of the four yugas. For each activity, that is completed correctly, the reader can earn stars and tally them to obtain his or her level of awareness about Hinduism. Through the different word puzzles, mazes, matching games, and other activities, this book provides one of the most unique and fun ways to teach yourself Hinduism.

QuickBASIC and QBASIC Using Modular Structure Julia Case Bradley, 1994 Stressing good programming skills, this is intended for introductory programming courses using BASIC. It introduces the features of the language and includes an extensively revised chapter on graphics.

Having Fun with Maps and Globes Abraham Resnick, 2000-05-26 The primary purpose of his handbook is to provide

educators with a variety of proven activities to make learning map and globe skills both enjoyable and meaningful for your students. The activities which include cross curriculum can be used with multiple grade levels, small groups or individually. Having Fun with Maps and globes is organized into six parts. Part One introduces you to the basic goals of a Map and Globe Skills Program and concludes with some general Tips for Teachers. Part Two provides activities for teaching the basic concepts of maps and globes. Because the ability to read and make maps involves many individual skills, the activities in this section are organized into several categories or subsets of skills. For each subset, several fully developed activities are presented along with a grab bag of additional activities that can be used in a stand alone map and globe unit or to reinforce general map skills. Because map and globe skills support other curriculum areas besides social studies, Part Three provides activities organized by subject area. This allows you to locate the subject you are teaching and access several related map and globe skill activities. Such cross curriculum tasks will reinforce art, math, reading, science, language and thinking skills. For easy access, all student activity sheets called Supplements in this manual are located in Part Four of the handbook. Part Five lists currently available resources for teachers and students. Beyond the standard lists of print materials, the author has provided sources for multimedia kits and computer software that will enrich anyone's program. An appendix which includes map masters, a glossary of terms and comparison charts concludes the handbook. Although these materials are mentioned in various activities throughout the book, here they are more accessible as a reference and as a source from which to draw in developing your own lessons or an entire school program. Because of the wide range of resources, Having Fun with Maps and Globes provides this handbook is a wonderful companion to the supplementary materials you presently use in your school curriculum.
