Nienhuis, Ramesh D. Gulati, 2013-03-14 This work presents the state of the art of aquatic and semi aquatic ecological restoration projects in The Netherlands Starting from the conceptual basis of restoration ecology the successes and failures of hundreds of restoration projects are described Numerous successful projects are mentioned In general ecological restoration endeavours greatly benefit from the progressive experience achieved in the course of the years Failures mainly occur through insufficient application of physical chemical or ecological principles Spontaneous colonization by plants and animals following habitat reconstruction is preferred However sometimes the re introduction of keystone species e g eelgrass salmon beaver is necessary in case the potential habitats are isolated or fragmented or if a seed bank is lacking thus not allowing viable populations to develop Re introducing traditional management techniques e g mowing without fertilization low intensity grazing is important to rehabilitate the semi natural and cultural landscapes that are so characteristic for The Netherlands Theme: Ecological Restoration of Aquatic and Semi-aquatic Ecosystems in the Netherlands (NW Europe) R.

*Urban Ecology* Philip James, Ian Douglas, 2014-10-30 Urban Ecology An Introduction seeks to open the reader s mind and eyes to the way in which nature permeates everyday urban living and how it has to be understood cared for and managed in order to make our towns and cities healthier places to visit and in which to live and work The authors examine how nature can improve our physical and mental health the air we breathe and the waters we use as well as boosting our enjoyment of parks and gardens Urban Ecology sets out the science that underlies the changing natural scene and the tools used to ensure that cities become both capable of adapting to climate change and more beautiful and resilient The book begins with a

discussion of the nature of urban places and the role of nature in towns and cities Part 1 looks at the context and content of urban ecology its relationship to other foci of interest within ecology and other environmental sciences and the character of city landscapes and ecosystems In Part 2 the authors set out the physical and chemical components of urban ecosystems and ecological processes including urban weather and climate urban geomorphology and soils urban hydrology and urban biogeochemical cycles In Part 3 urban habitats urban flora and fauna and the effects of deliberate and inadvertent human action on urban biota are examined Part 4 contains an exploration of the identification and assessment of ecosystem services in urban areas emphasising economic evaluation the importance of urban nature for human health and well being and restoration ecology and creative conservation Finally in Part 5 the tasks for urban ecologists in optimising and sustaining urban ecosystems providing for nature in cities adapting to climate change and in developing the urban future in a more sustainable manner are set out Within the 16 chapters of the book in which examples from around the world are drawn upon the authors explore current practice and future alternatives set out procedures for ecological assessment and evaluation suggest student activities and discussion topics provide recommended reading and an extensive bibliography The book contains more than 150 tables and over 150 photographs and diagrams

**Coastal Wetlands** Gerardo M.E. Perillo, Eric Wolanski, Donald R. Cahoon, Mark M. Brinson, 2009-01-18 Coastal wetlands are under a great deal of pressure from the dual forces of rising sea level and the intervention of human populations both along the estuary and in the river catchment Direct impacts include the destruction or degradation of wetlands from land reclamation and infrastructures Indirect impacts derive from the discharge of pollutants changes in river flows and sediment supplies land clearing and dam operations As sea level rises coastal wetlands in most areas of the world migrate landward to occupy former uplands The competition of these lands from human development is intensifying making the landward migration impossible in many cases This book provides an

understanding of the functioning of coastal ecosystems and the ecological services that they provide and suggestions for their management In this book a CD is included containing color figures of wetlands and estuaries in different parts of the world Includes a CD containing color figures of wetlands and estuaries in different parts of the world A Field Guide to British Rivers George Heritage, Andy Large, David Milan, 2021-10-11 Temperate rivers are influenced by many factors including geology climate soils sediment type flow as well as human activity The complex interactions of the non anthropogenic controlling factors have led to a wonderful diversity of river type throughout the British Isles Sadly almost all rivers in the UK have suffered significant and long lasting modification by unsympathetic management that has all but destroyed this variety creating watercourses that are simplified conduits for water and sediment designed primarily to drain the land and reduce flood risk This volume aims to help reverse this illustrating using over 200 images and descriptions this variety of rivers in Britain highlighting the many forms that temperate river systems take and providing an accessible summary of the underlying river science knowledge base A Field Guide to British Rivers covers the full range of upland and lowland channel types and describes the full variety of substrate conditions from bedrock through boulder cobble and gravel to silt dominated systems The authors describe examples gathered from their extensive research and practical experience working with rivers throughout mainland Britain and set those examples in their wider landscape context to exemplify the natural functioning of temperate river types This book offers a practical and contextualised guide to contribute to efforts towards the sympathetic and sustainable restoration and re naturalisation of degraded channels in the UK Offering a unique viewpoint of both the underpinning science and the practicalities of river management A Field Guide to British Rivers is an essential a stand alone guide for anyone involved in river restoration and management as well as for those simply interested in rivers in general Written as a field guide to demonstrate practical examples of river types and to highlight the pressures they experience and their often parlous condition this book is intended to better inform both river management approaches and the policy necessary to achieve this Fundamentally the authors seek to demonstrate how the hydrological geomorphological and ecological functions of rivers and their catchments are inexorably intertwined and together how they generate and maintain rivers as dynamic entities *Living Rivers: Trends and Challenges in Science and Management* R.S.E.W. Leuven, A.M.J. Ragas, A.J.M. Smits, G. van der Velde, 2007-12-20 All over the world sustainable river basin management is a leading principle of policy plans and legal instruments for water management e g the European Water Framework Directive The evidence however to underpin the full scope of sustainability is rather scanty In this book an integrative perspective on trends and challenges in river science and management is demonstrated The three pillars underneath sustainable water management ecology economy and sociology are elaborated by experts in their fields A number of papers integrate the current knowledge on the structure functioning and management of living rivers The book includes data and experiences concerning the rivers Allier Meuse Rhine Sava and Tagliamento in Europe and the river

(Mel) Suffet, 2018-03-15 This book provides an updated evaluation of the characterization and management of taste and odour T O in source and drinking waters Authored by international experts from the IWA Specialist Group on Off flavours in the Aquatic Environment the book represents an important resource that synthesizes current knowledge on the origins mitigation and management of aquatic T O problems The material provides new knowledge for an increasing widespread degradation of source waters and global demand for high quality potable water Key topics include early warning detection and source tracking chemical sensory and molecular diagnosis treatment options for common odorants and minerals source management modelling and risk assessment and future research directions Taste and Odour in Source and Drinking Water is directed towards a wide readership of scientists engineers technical operators and managers and presents both practical and theoretical material including an updated version of the benchmark Drinking Water Taste and Odour Wheel and a new biological wheel to provide a practical and informative tool for the initial diagnosis of the chemical and biological sources of aquatic T O **Hamilton City Flood Damage Reduction and Ecosystem Restoration, Glenn County**, 2004

**Managing Water Resources for Sustainable Socioeconomic Development** Rabindra P. Osti, 2018-12-01 This study provides an overview of the water security situation in the People s Republic of China It assesses the policy and institutional requirements for addressing issues and recommends strategic areas for strengthening and reform The five dimensions of water security covered in the research are domestic water security economic production water security environmental water security ecological water security and resilience to water related disasters A summary of key policy recommendations identifies the essential measures needed to effectively move forward the alleviation of water security issues in different time frames Coastal Wetlands Gerardo Perillo, Eric Wolanski, Donald R Cahoon, Charles S Hopkins, 2018-11-02 Coastal Wetlands Second Edition An Integrated and Ecosystem Approach provides an understanding of the functioning of coastal ecosystems and the ecological services that they provide As coastal wetlands are under a great deal of pressure from the dual forces of rising sea levels and the intervention of human populations both along the estuary and in the river catchment this book covers important issues such as the destruction or degradation of wetlands from land reclamation and infrastructures impacts from the discharge of pollutants changes in river flows and sediment supplies land clearing and dam operations Covers climate change and its influence on coastal wetland form and function Provides a fully updated and expanded resource including new chapters on modeling management and the impact of climate change Contains full color figures of wetlands and estuaries in different parts of the world **Flood Damage Reduction and Ecosystem Restoration, Lower Colorado River Basin**, 2005 **Coastal environment in a changing world**, 2023-06-08 **Ecosystem restoration and inland food fisheries in developing countries** Food and Agriculture Organization of the United Nations, 2023-08-09 The

review presents the strong business case for inland food fisheries in developing countries to be either a co benefit or very often the main benefit of ecosystem restoration In view of the current state of inland water aquatic habitats the potential for restoration is high Realizing this potential requires concerted action to overcome current challenges foremost of which is the invisibility of inland fisheries in many policy arenas as well as technical and scientific fora The drivers of ecosystem degradation ecosystem services valuation frameworks and the main technical tools for implementing interventions are presented Experiences in developed countries dominate the literature but are not necessarily applicable to developing country inland food fisheries Local communities that have high dependency on inland fisheries and live in close association with inland water fisheries habitats not only provide much higher fisheries values but a management asset that is unavailable in developed countries and the mainstay of many successful restoration programmes Ten case studies representing effective restoration of food fisheries from local to basin scale are used to illustrate what can be achieved The prospects of inland fisheries benefiting from or contributing to the UN Decade on Ecosystem Restoration 2021 2030 are good but upscaling the existing progress will require increased and sustained efforts to mainstream the values of inland fisheries including their co benefits for biodiversity conservation
