Ecology For Environmental Professionals:

Ecology for Environmental Professionals Dorothy J. Howell, 1994 If as has been asserted everything in nature is connected to everything else it is a lesson yet to be reflected among environmental professions especially those serving law and policy Nowhere is the lack of integration more apparent than in the incorporation of sound ecological principles Yet comprehension of these principles is a prerequisite to establishing effective environmental programs whether local or global Ecology and environmental sciences range from cosmology to determining toxic effects in a biological system In short ecology is served by and is itself a manifestation of all the natural sciences Ecology is further manifested in the social sciences directly and indirectly In this book ecology and environmental sciences are presented to environmental professionals in terms relevant to all their endeavors Today s ecologies emerge from the venerable scientific endeavor Upon placing ecology in the hierarchy of natural sciences this volume centers on the wealth of dimensions in which ecology is expressed Extending beyond the three spatial dimensions and that of time ecology enters those of holistic and reductionist vantages the last reflected in abiotic and biotic detail Dimensions serving environmental professions include the experimental those arising from interrelationships with adaptation and evolution and that of human ecology Finally there is the intellectual dimension Ecology as one thread in the contemporary cultural tapestry into which environmental policy and law are being woven Scrupulously avoiding superimposition of political stance this unique volume serves anyone lacking scientific preparation who would take a stance professional or personal

Critical Skills for Environmental Professionals

Jennifer Pontius, Alan McIntosh, 2019-12-20 This textbook focuses on a set of skills based learning outcomes common among undergraduate environmental programs It covers critical scientific skills and ways of thinking that bridge the gap between the knowledge based content of introductory environmental textbooks and the professional skills students of the environment need to succeed in both their academic programs and professional careers This emphasis on skills is gaining more traction among academic programs across the country as they shift focus from knowledge delivery to learning outcomes and professional competencies The book features clear methodological frameworks engaging practice exercises and a range of assessment case studies suitable for use across academic levels For introductory levels this text uses guided practice exercises to expose students to the skills they will need to master At the capstone level this text allows students to apply the knowledge they have gained to real world issues and to evaluate their competency in key programmatic learning outcomes A detailed answer key with rubrics customized for specific questions and sample answers at various competency levels is available to verified course instructors Access to these answer key resources can be obtained by contacting the Springer Textbook Team at Textbooks.springer.com
