**Social Struggles and Thought (1750-1860)** Max Beer, 1925

**The Industrial Revolutions, Volume 1** J. Chartres, 1994-03-23 Britain in the sixteenth century appeared little different from its European neighbours and shared their renewed Malthusian pressures as population growth threatened the resource base of the economy Yet by the later seventeenth century Britain had broken the limits imposed by food production With the development of its trade transport and industry and the effective integration of its economy as a whole the country was becoming by the later eighteenth century more urban and industrial than its neighbours and was rapidly overtaking the Netherlands as the least rural country in Europe This volume of key readings sets British development in its broad context and in presenting the strong evidence of the extent and nature of its economic advance in the seventeenth and early eighteenth centuries provides the critical background for the understanding of the late process of British industrialization

**Revolution in History** Roy Porter, Mikuláš Teich, 1986-10-09 Fifteen contributors examine the interpretative value of ideas of revolution for explaining historical development within their own speciality They assess the existing historiography and offer their personal views

The Secrets of Hegemony Tai-Yoo Kim, Daeryoon Kim, 2017-03-29 This book revisits the historically different paths to economic development that Spain the Netherlands Great Britain and the United States followed at different time periods since the early modern period Addressing the questions of how economic growth came about in these four countries and why sustained economic growth was achieved only by the two latter economic powers Great Britain and the United States it clearly highlights the long term economic impact of the individual economic systems each country had developed This discussion draws on two important variables in economic systems whether its primary activity is agriculture commerce or manufacturing and whether its productive system expands or simply reproduces From this interpretive framework the book

suggests that the existing literature has not yet paid sufficient attention to the enduring impact on a nation's long term economic performance of their differing economic systems simple agricultural reproduction system Spain expansive commercial reinvestment system the Netherlands and expansive industrial reproduction system Great Britain and the United States The book also demonstrates why sustained economic growth was viable only within an expansive industrial reproduction system and what conditions Great Britain and the United States had to fulfill to create such an economic system in their specific historical contexts It concludes by reflecting on the policy implications of the findings on current discussions concerning economic development within the global economy

**Popular Politics and the American Revolution in England** James E. Bradley, 1986

**Labor Before the Industrial Revolution** Thomas Max Safley, 2018-11-09 One cannot conceive of capitalism without labor Yet many of the current debates about economic development leading to industrialization fail to directly engage with labor at all This collection of essays strives to correct this oversight and to reintroduce labor into the great debates about capitalist development and economic growth before the Industrial Revolution By attending to the effects of specific regulatory technological social and physical environments on producers and production in a set of specific industries these essays use an ecological approach that demonstrates how productivity knowledge and regime changed between 1400 and 1800 This book will be of interest to researchers in history especially labor history and European economic development

**Immigrants and the Industries of London, 1500-1700** Lien Bich Luu, 2017-03-02 Immigration is not only a modern day debate Major change in Europe in the sixteenth and seventeenth centuries led to a surge of political and religious refugees moving across the continent Estimates suggest that from 1550 to 1585 around 50 000 Dutch and Walloons from the southern Netherlands settled in England and in the late seventeenth century 50 000 Huguenots from France followed suit The majority gravitated towards London which already a magnet for merchants and artisans across the centuries began a process of major transformation New skills capital technical know how and social

networks came with these migrants and helped to spark London's cosmopolitan flair and diversity. But the early experience of many of these immigrants in London was one of hostility serving to slow down the adoption and expansion of new crafts and technologies. *Immigrants and the Industries of London 1500-1700* examines the origins and the changing face and shape of many trades, crafts and skills in the capital in this transformative period. It focuses on three crafts in particular: silk weaving, beer brewing and the silver trade, crafts which had relied heavily on foreign skills in the 16th century and had become major industries in the capital by the 18th century. Each craft was established by a different group of immigrants distinguished not only by their social backgrounds, social organisation, identity, motives, migration pattern and experience and links with their home country but also by the nature of their reception, assimilation and economic contribution. Change was a protracted process in the London of the day. Immigrants endured inferior status, discrimination and sometimes exclusion and this affected both their ability to integrate and their willingness to share trade secrets. And resistance by the English population meant that the adoption of new skills often took a long time; in some cases more than three centuries to complete. The book places the adoption of new crafts and technologies in London within a broader European context and relates it to the phenomenal growth of the metropolis and technological developments within these specific trades. It throws new perspectives on the movement of skills from Europe and the transmission of know-how from the immigrant population to English artisans. The book explores how, through enterprise and persistence, the immigrants' contribution helped transform London from a peripheral and backward European city to become the workshop of the world by the nineteenth century. By way of conclusion, the book brings the current immigration debate full circle to examine the lessons we can draw from this early modern experience.

**Culture, Ideology and Politics (Routledge Revivals)** Raphael Samuel, Gareth Stedman

Jones, 2016-05-20. First published in 1982, this book is inspired by the ideas generated by Eric Hobsbawm and has taken shape around a unifying preoccupation with the symbolic order and its relationship to political and religious belief. It explores some of the oldest questions in Marxist historiography, for example the relationship of base and superstructure, art and social life, and also some of the newest and most problematic questions, such as the relationship of dreams and fantasy to political action, or of past and present historical consciousness to the making of ideology. The essays, which range widely over period and place, are intended to break new ground and take on difficult questions.

**Globalization in World History** Antony G. Hopkins, 2002. Globalisation was the buzzword of the 1990s; it promises to become even more important in the first decade of the new century. There is now a flood of literature on the economics, politics and sociology of globalization and regular commentary in the serious daily and weekly press. Virtually all of this discussion makes assumptions and frequently explicit claims about the novelty of globalisation. According to one view, the globalisation is a new phenomenon that can be dated from the 1980s. A second view holds that globalisation has a long history that can be traced back to the nineteenth century, if not earlier. The importance of these themes scarcely needs elaborating. Yet they have still to attract significant attention from

historians This volume is the first by a team of historians to address these issues Globalisation in World History has two distinctive features First it offers a categorisation of types and stages of globalisation that existed before the late twentieth century No such taxonomy exists at present Secondly it emphasises a feature that the current debate greatly underestimates the fact that globalisation has non Western as well as Western origins Globalisation is much more than the rise of the West presented in new terminology The contributors bring their expertise to bear on themes that give prominence to China South Asia Africa and the world of Islam as well as to Europe and the United States and span the last three centuries while also showing an awareness of more distant antecedents The result is a coherent and thought provoking collection of essays Globalisation will become a major theme of historical research during the next decade this book will help to set the new agenda
