It also clearly identifies the three quite different arenas of biogeographical research: continental biogeography, island biogeography, and marine biogeography. It is the only current textbook with full coverage of marine biogeography. It reveals how the patterns of life that we see today have been created by the two great Engines of the Planet: the Geological Engine (plate tectonics) which alters the conditions of life on the planet, and the Biological Engine (evolution) which responds to these changes by creating new forms and patterns of life.
