Ecomorphology of fishes Joseph J. Luczkovich, Philip J. Motta, Stephen F. Norton, Karel F. Liem, 2013-04-17

Ecomorphology is the comparative study of the influence of morphology on ecological relationships and the evolutionary impact of ecological factors on morphology in different life intervals populations species communities and evolutionary lineages The book reviews early attempts at qualitative descriptions of ecomorphological patterns in fishes especially those of the Russian school More recent quantitative studies are emphasised including multivariate approaches to ecomorphological analysis the selection of functionally important ecological and morphological variables to analyze an experimental approach using performance tests to examine specific hypotheses derived from functional morphology and the evolutionary interpretations of ecomorphological patterns Six major areas of fish biology are focused on feeding sensory systems locomotion respiration reproduction and phylogenetic relationships The 18 papers in the volume document 1 how the morphology of bony fishes constrains ecological patterns and the use of resources 2 whether ecological constraints can narrow the niche beyond the limits imposed by morphology fundamental vs realized niche 3 how communities of fishes are organized with respect to ecomorphological patterns and 4 the degree to which evolutionary pressures have produced convergent or divergent morphologies in fishes A concluding paper summarizes ecomorphological research in fishes and points out taxa that are underrepresented or are especially promising for future research

Ecomorphology of Fishes

,1995 **Patterns in Freshwater Fish Ecology** William J. Matthews, 2012-12-06 Nearly a decade ago I began planning this book with the goal of summarizing the existing body of knowledge on ecology of freshwater fishes in a way similar to that of H B N Hynes comprehensive treatise Ecology of Running Waters for streams The time seemed appropriate as there had been several recent volumes that synthesized much information on a range of topics important in fish ecology from biogeographic to local scales For example the Fish Atlas Lee et al 1980 had provided range maps and basic entry to the original literature for all freshwater fishes in North America and in 1986 Hocutt and Wiley s Zoogeography of North American Fishes provided a detailed synthesis of virtually everything known about distributional ecology of fishes on that continent Tim Berra 1981 had summarized in convenient map form the worldwide distribution of all freshwater fish families and Joe Nelson s 1976 and 1984 editions of Fishes of the World had appeared To complement these big picture views of fish distributions the volume on Community and Evolutionary Ecology of North American Freshwater Fishes edited by David Heins and myself Matthews and Heins 1987 had provided an opportunity for more than 30 individuals or groups to summarize their work on stream fishes albeit mostly for warmwater systems

Fish Physiology: Fish Biomechanics Robert E. Shadwick, George V.

Lauder, 2006-02-02 The first in two decades to exclusively integrate physiological and biomechanical studies of fish locomotion feeding and breathing making this book both comprehensive and unique Fish Physiology Fish Biomechanics reviews and integrates recent developments in research on fish biomechanics with particular emphasis on experimental

results derived from the application of innovative new technologies to this area of research such as high speed video sonomicrometry and digital imaging of flow fields The collective chapters written by leaders in the field provide a multidisciplinary view and synthesis of the latest information on feeding mechanics breathing mechanics sensory systems stability and maneuverability skeletal systems muscle structure and performance and hydrodynamics of steady and burst swimming including riverine passage of migratory species Book presents concepts in biomechanics a rapidly expanding area of research First volume in over twenty years on this subject Multi author volume with contributions by leaders in the field Clear explanations of basic biomechanical principles used in fish research Well illustrated with summary figures and explanatory color diagrams

Centrarchid Fishes Steven Cooke, David P. Philipp, 2009-09-08 Centrarchid fishes also known as freshwater sunfishes include such prominent species as the Largemouth Bass Smallmouth Bass and Bluegill They are endemic to Eastern North America where they form part of a multi million dollar sports fishing industry but they have also been widely introduced around the globe by recreational anglers in aquaculture programs and by government fisheries agencies Centrarchid Fishes provides comprehensive coverage of all major aspects of this ecologically and commercially important group of fishes Coverage includes diversity ecomorphology phylogeny and genetics hybridization reproduction early life history and recruitment feeding and growth ecology migrations bioenergetics physiology diseases aquaculture fisheries management and conservation Chapters have been written by well known and respected scientists and the whole has been drawn together by Professors Cooke and Philipp themselves extremely well respected in the area of fisheries management and conservation Centrarchid Fishes is an essential purchase for all fish biologists ecologists fisheries managers and fish farm personnel who work with centrarchid species across the globe

Coral Reef Fishes Peter F. Sale, 2006-07-20 Coral Reef Fishes is the successor of The Ecology of Fishes on Coral Reefs This new edition includes provocative reviews covering the major areas of reef fish ecology Concerns about the future health of coral reefs and recognition that reefs and their fishes are economically important components of the coastal oceans of many tropical nations have led to enormous growth in research directed at reef fishes This book is much more than a simple revision of the earlier volume it is a companion that supports and extends the earlier work The included syntheses provides readers with the current highlights in this exciting science An up to date review of key research areas in reef fish ecology with a bibliography including hundreds of citations most from the last decade Authoritative and provocative chapters written to suggest future research priorities Includes discussions of regulation of fish populations dispersal or site fidelity of larval reef fishes sensory and motor capabilities of reef fish larvae and complexities of management of reef species and communities

Fish Ecology Robert J. Wootton, 2012-12-06 Fishes live in a world that is unfamiliar to us Although we may make or even more advanced brief visits to this other world using a snorkel scuba diving equipment we can never become a part of it Yet an understanding of fish ecology requires an awareness of the relationships between fishes and their environment The purpose of this book is

to introduce the ecology of fishes by describing the inter relationships between fishes and the aquatic habitats they occupy The book can be read in complementary ways A sequential reading chapter by chapter covers the main themes of ecology including habitat use species interactions migration feeding population dynamics and reproduction in relation to the major habitats occupied by fishes An alternative reading selects a particular sort of habitat such as rivers and by using the index and skipping from chapter to chapter builds up a picture of the ecology of fishes living in that habitat The text is written for advanced students Its emphasis is on descriptive rather than quantitative ecology It is assumed that the reader will be familiar with the basic biology of fishes acquired from a text such as *The Biology of Fishes* Bone and Marshall 1982 also published in the Tertiary Level Biology series I would like to thank Dr J D Fish and two anonymous reviewers who within a tight time schedule tried to improve the text Any mistakes and shortcomings are my contribution

The Histology of Fishes Krzysztof Formicki, Frank Kirschbaum, 2019-10-08 The book is a multi authored book of 18 chapters comprising the state of the art work of all relevant topics on modern fish histology from 28 authors from ten countries The topics include Introduction to Histological Techniques Integument Fish Skeletal Tissues Muscular System Structure and Function of Electric Organs Digestive System Glands of the Digestive Tract Swim Bladder Kidney Ovaries and Eggs Egg Envelopes Testis Structure Spermatogenesis and Spermatozoa in Teleost Fishes Cardiovascular System and Blood Immune System of Fish Gills Respiration and Ionic Osmoregulation Sensory Organs Morphology and Ecomorphology of the Fish Brain and Endocrine System Structural and functional aspects are treated and in a comparative way fish diversity at various taxonomic levels is integrated

Current References in Fish Research, 1998

Biology of Damselfishes Bruno Frédérich, Eric Parmentier, 2016-08-19 Damselfishes Pomacentridae are highly conspicuous diurnal inhabitants of mainly reef areas capturing the attention of many scientists Their high diversity and the many interesting characteristics dealing with their way of life sound production breeding biology sex change farming and gregarious behavior settlement diet habitat easily explain how this group is continually kept in the limelight and is the subject of numerous studies This book gathers the data dealing with damselfish morphology physiology behavior ecology and phylogeny It contains 14 chapters written by renowned scientists

The Physiology of Fishes, Second Edition David H. Evans, James B. Claiborne, 1997-10-10 As in the bestselling first edition *The Physiology of Fishes* Second Edition is a comprehensive state of the art review of the major areas of research in modern fish physiology This Second Edition is entirely revised with 17 of the 18 chapters written by new authors It also includes four entirely new chapters

Fish Ecomorphology, 2001 This research tested the ability of fish morphology to predict membership of fishes in habitat guilds their swimming performance and habitat preference Further it considered methods for choosing a surrogate species to identify habitat of target species Morphological discriminant functions were developed using morphological traits of fishes from one river to identify

membership in two habitat guild systems mesohabitat and microhabitat Functions were then used to test factors influencing classification success of holdout tests and validated using fishes of a second river Morphology was only partly successful 50% at predicting membership in habitat guilds Morphology identified species by shape i e classifying test species into guilds with members of their genus but not habitat use because morphology and habitat were not strongly linked through function By improving guild definition relationships between morphology and habitat Froude number were identified for all fish groups examined darters benthic minnows pelagic minnows and suckers Relationships were not transferable among groups Further morphology of eight minnows was linked to swimming performance a key task for using habitat in lab measurements of critical swimming speeds In turn swimming performance was related to habitat Froude number Morphology will be most successful at predicting habitat use of fishes when 1 more discrete guilds are used 2 guilds are identified within families 3 variation in lifestyles benthic vs pelagic is considered and 4 key tasks related to using habitat are strongly associated with morphology Finally I examined a phylogenetic approach to identifying useable habitat Closely related surrogate species were not more accurate in identifying habitat of target species than surrogates chosen by other methods

Intertidal Fishes Michael H. Horn, Karen L.M Martin, Michael A. Chotkowski, 1998-11-03 *Intertidal Fishes* describes the fishes inhabiting the narrow strip of habitat between the high and low tide marks along the rocky coastlines of the world It analyzes the specialized traits of these fishes that have adapted to living in the dynamic and challenging space where they are alternately exposed to the air and submerged in water with the ebb and flow of the tides This book provides a comprehensive account of fishes largely overlooked in many previous studies of intertidal organisms and emphasizes how they differ from fishes living in other deeper water habitats Coverage includes air breathing movements and homing sensory systems spawning and parental care feeding habits community structure systematic relationships distribution patterns and the fossil record in the intertidal zone Written by an international team of 21 experts on intertidal fish biology Worldwide coverage of intertidal fishes Comprehensive phylogenetic listing of all fish families with intertidal members Global biogeographic analysis involving over 700 species from 86 sites Outlines field and laboratory methods pertinent to studying intertidal fishes Thorough ecological coverage with chapters on vertical distribution movements and homing reproduction feeding and community structure Covers the physiology of aerial and aquatic respiration osmoregulation and sensory systems
