but they are not perfect We harm the environment not out of malice but because we do not know the consequences of our actions or the incentives for harm are too great to ignore Economics and the Environment argues that by lowering the cost and improving the quality of the necessary signals and incentives we can better reconcile our diverse interests in the environment It introduces an economic way of thinking about environmental issues without assuming a background in economics how the economy and the environment interact how resource use is coordinated in ideal market and planned economies the barriers to ideal signalling and incentives in real markets and real government planning the economist s tools for dealing with natural resource issues the uncertainty and complexity of environmental issues climate change water rights air pollution and overharvesting of common resources This second edition of Economics and the Environment is fully updated and includes new material on sustainability valuation of environmental changes the prospects for international cooperation under the Kyoto Protocol and the problems of defining and enforcing measures to protect biodiversity It offers students in both economics and environmental studies programs a coherent framework for understanding our major environmental problems Ian Wills succeeds in providing a fresh perspective a very interesting and informative textbook Economic Record

Impacts on Agriculture in the New Europe Serban Scrieciu, 2011-03-13 This book looks at agriculture and the environment placed within the dynamic context of post communist societal change and entry into the European Union EU Scrieciu explores developments in eleven Central and Eastern European CEE countries and argues for agriculture's natural place in these societies The history of these countries is significant in how it has shaped the institutions and influenced the outcomes In many cases during communism agriculture was not considered a strategically An ecological consciousness did not figure high on the agendas of authoritarian regimes After 1990 some post communist farm economies progressed slower than others and environmental pressures mostly diminished with agricultural restructuring In parts of CEE increases in numbers of low input small farms have resulted in some though largely unintended ecological benefits A dual environmental challenge has nevertheless surfaced On one hand environmentally unsustainable practices have been attributed to some low input farming On the other hand risks of farm over intensification and resource overexploitation are on the rise Also environmental regulatory and institutional frameworks are not always effectively in place EU membership is not creating the anticipated benefits for farm growth There are a number of systemic structural barriers preventing many farmers from drawing on Common Agricultural Policy incentives and support The presence of many vulnerable poor farms is clearly problematic particularly economically However small scale farms could be made more acceptable and profitable by ensuring EU policies acknowledge their value and by building institutions to support alternative farm growth strategies aside from the traditional European model of individual corporate farm expansion The voluntary uptake of grassroots rural cooperation and farm associations may represent such an alternative Future European farm policy reforms need to reach the small and vulnerable and better tackle issues of farm equity poverty and agricultural sustainability in the new Europe This is a timely contribution as this type of transition has just begun This book should be of use to students and researchers looking at agricultural and environmental economics post communist rural societal change European integration and the Common Agricultural Policy
