Mathematics, Administrative and Economic Activities in Ancient Worlds Cécile Michel, Karine Chemla, 2020-09-29 This
book focuses on the ancient Near East early imperial China South East Asia and medieval Europe shedding light on
mathematical knowledge and practices documented by sources relating to the administrative and economic activities of
officials merchants and other actors It compares these to mathematical texts produced in related school contexts or
reflecting the pursuit of mathematics for its own sake to reveal the diversity of mathematical practices in each of these
geographical areas of the ancient world Based on case studies from various periods and political economic and social
contexts it explores how in each part of the world discussed it is possible to identify and describe the different cultures of
quantification and computation as well as their points of contact The thirteen chapters draw on a wide variety of texts from
ancient Near East China South East Asia and medieval Europe which are analyzed by researchers from various fields
including mathematics history philology archaeology and economics The book will appeal to historians of science economists
and institutional historians of the ancient and medieval world and also to Assyriologists Indologists Sinologists and experts on
medieval Europe **Handbook of the History and Philosophy of Mathematical Practice** Bharath Sriraman, 2024-04-26

The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present. It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed. Each section offers insights into the origins, debates, methodologies, and newer perspectives that characterize the discipline today. Contributions are written by scholars from mathematics, history, and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy.

This book, with its exciting depth and breadth, illuminates us about the history, practice, and the very language of our subject about the role of abstraction, of proof, and manners of proof about the interplay of fundamental intuitions about algebraic thought in contrast to geometric thought. The richness of mathematics and the philosophy encompassing it is splendidly exhibited over the wide range of time these volumes cover, from deep Platonic and Neoplatonic influences to the most current experimental approaches. Enriched as well with vivid biographies and brilliant personal essays written by and about people who play an important role in our tradition, this extraordinary collection of essays is fittingly dedicated to the memory of Chandler Davis, Reuben Hersch, and Yuri Manin.

Barry Mazur, Gerhard Gade, University Professor, Harvard University

This encyclopedic Handbook will be a treat for all those interested in the history and philosophy of mathematics. Whether one is interested in individuals from Pythagoras through Newton and Leibniz to Grothendieck, fields, geometry, algebra, number theory, logic, probability, analysis, viewpoints from Platonism to Intuitionism, or methods, proof, experiment, computer assistance, the reader will find a multitude of chapters that inform and fascinate.

John Stillwell, Emeritus Professor of Mathematics, University of San Francisco
 Recipient of the 2005 Chauvenet Prize

Dedicating a volume to the memory of three mathematicians, Chandler Davis, Reuben Hersch, and Yuri Manin, who went out of their way to show to a broader audience that mathematics is more than what they might think is an excellent initiative. Gathering authors coming from many different backgrounds but who are very strict about the essays they write was successfully achieved by the editor in chief. The result, a great source of potential inspiration.
