Edge Effects Robert D. Temple, 2008-11-19 There's something fascinating about border towns Who hasn't crossed the line into another state to buy fireworks gamble or even to get married Here are border towns with names as unique as the places themselves names that bridge the boundaries Robert D Temple brings you a quirky fascinating and wholly entertaining look at more than eighty North American border towns in *Edge Effects* With an adventurer's heart and a historian's keen eye Temple explores life on the edge and how these places have made their place in history There's big city Mexicali and empty quarter Idavada idyllic Vir Mar Beach and whiskey soaked Mondak Then there's prairie bleak Alsask mountain high Wyocelo and palmy Floral And who could forget Texarkana Along with finding these towns in the first place comes adventure in exploring them by highway four wheel drive boots and kayak and in encountering memorable locals historians farmers waitresses cops forest rangers railroaders and neer do wells But even more these places lead us to investigate concepts of borders boundaries frontiers margins and marginality as well as survey lines battle lines picket lines and color lines *Edge Effects* brilliantly examines how frontiers enrich cultures and boundaries define them But more importantly it reveals how edges shape local history and our lives A revised edition of *Edge Effects* was published July 10 2009 *The Leading-edge Effects on the Laminar Flat-plate Boundary Layer and the Aerodynamic Heating at Mach 10.4* Howard W. Stone, 1969

Habitat Fragmentation and Landscape Change David B. Lindenmayer, Joern Fischer, 2013-02-22 Habitat loss and degradation that comes as a result of human activity is the single biggest threat to biodiversity in the world today *Habitat Fragmentation and Landscape Change* is a groundbreaking work that brings together a wealth of information from a wide range of sources to define the ecological problems caused by landscape change and to highlight the relationships among landscape change habitat fragmentation and biodiversity conservation The book synthesizes a large body of information from the scientific literature considers key theoretical principles for examining and predicting effects examines the range of effects that can arise explores ways of mitigating impacts reviews approaches to studying the problem discusses knowledge gaps and future areas for research and management *Habitat Fragmentation and Landscape Change* offers a unique mix of theoretical and practical information outlining general principles and approaches and illustrating those principles with case studies from around the world It represents a definitive overview and synthesis on the full range of topics that fall under the widely used but often vaguely defined term habitat fragmentation *Edge Effects* Chris Anderson, 1993-11 Buying his dream house several years ago on the forest's edge near Corvallis Oregon essayist Chris Anderson hoped to find the joys of rural living Despite interminable Mr Blandings experiences he lived embowered by 12 000 acres of seemingly endless fir trees But not for long The McDonald Dunn Forest was about to become the site of a disturbing research project Little did Anderson know when he bought his house that in addition to studying the ecological effects of clear cutting the researchers wanted to see how urban fringe dwellers might be affected too The shock of that harvest compelled the essays in this vibrant

graceful record of the relationship between the forest and Anderson's life on its boundary *Large-Scale Landscape Experiments* David Lindenmayer, 2009-03-05 An overview of relationships between landscape change habitat fragmentation and biodiversity conservation using key lessons from the Tumut Fragmentation Study **Managing and Designing Landscapes for Conservation** David B. Lindenmayer, Richard J. Hobbs, 2008-04-15 The distinctive relationships between landscape change habitat fragmentation and biodiversity conservation are highlighted in this original and useful guide to the theory and practice of ecological landscape design Using original ecologically based landscape design principles the text underscores current thinking in landscape management and conservation It offers a blend of theoretical and practical information that is illustrated with case studies drawn from across the globe Key insights by some of the world's leading experts in landscape ecology and conservation biology make *Managing and Designing Landscapes for Conservation* an essential volume for anyone involved in landscape management natural resource planning or biodiversity conservation

Ecology of Fragmented Landscapes Sharon K. Collinge, 2009-06 Ask airline passengers what they see as they gaze out the window and they will describe a fragmented landscape a patchwork of desert woodlands farmlands and developed neighborhoods Once contiguous forests are now subdivided tallgrass prairies that extended for thousands of miles are now crisscrossed by highways and byways Whether the result of naturally occurring environmental changes or the product of seemingly unchecked human development fractured lands significantly impact the planet's biological diversity In *Ecology of Fragmented Landscapes* Sharon K Collinge defines fragmentation explains its various causes and suggests ways that we can put our lands back together Researchers have been studying the ecological effects of dismantling nature for decades In this book Collinge evaluates this body of research expertly synthesizing all that is known about the ecology of fragmented landscapes Expanding on the traditional coverage of this topic Collinge also discusses disease ecology restoration conservation and planning Not since Richard T T Forman's classic *Land Mosaics* has there been a more comprehensive examination of landscape fragmentation *Ecology of Fragmented Landscapes* is critical reading for ecologists conservation biologists and students alike **Ecological Principles of Nature Conservation** I. Hansson, 2012-12-06 This volume is the first in a series entitled *Conservation Ecology Principles Practices and Management* a theme which Elsevier's pioneering journal *Biological Conservation* has promoted since its foundation thirty three years ago The science of conservation ecology is now widely acknowledged as an essential component in the planning and development of activities which change or modify our natural environment Nevertheless in spite of much research and publicity there is still a wide gap between theory and practice Today it is especially important to try to bridge this gap by interpreting the results of ecological research so that they are understandable and relevant to a wide range of land managers agriculturalists foresters and those working in the many categories of protected areas The volumes in this series are designed to fulfil this purpose and also to play an important educational role for students of the environmental sciences in schools universities and other institutions

3D Seismic Survey Design Gijs J. O. Vermeer,2012 Since the first edition of 3D Seismic Survey Design appeared in 2002 seismic data acquisition has seen many changes most of which have been captured in this second edition This book by Gijs Vermeer describes in detail the properties of 3D acquisition geometries and shows how these properties naturally lead to the 3D symmetric sampling approach to 3D survey design Many examples from the literature are used to illustrate good and less good choices of acquisition parameters The link between survey parameters and noise suppression as well as imaging is an intrinsic part of the contents This book should be of great interest to the designer of 3D seismic surveys but also to every geophysicist who uses 3D seismic data to retrieve accurate information on the properties of the subsurface
