Teaching Machines Audrey Watters, 2023-02-07 How ed tech was born Twentieth century teaching machines from Sidney Pressey's mechanized test giver to B F Skinner's behaviorist bell ringing box Contrary to popular belief ed tech did not begin with videos on the internet The idea of technology that would allow students to go at their own pace did not originate in Silicon Valley

In Teaching Machines education writer Audrey Watters offers a lively history of predigital educational technology from Sidney Pressey's mechanized positive reinforcement provider to B F Skinner's behaviorist bell ringing box Watters shows that these machines and the pedagogy that accompanied them sprang from ideas bite sized content individualized instruction that had legs and

were later picked up by textbook publishers and early advocates for computerized learning Watters pays particular attention to the role of the media newspapers magazines television and film in shaping people's perceptions of teaching machines as well as the psychological theories underpinning them She considers these machines in the context of education reform the political reverberations of Sputnik and the rise of the testing and textbook industries She chronicles Skinner's attempts to bring his teaching machines to market culminating in the famous behaviorist's efforts to launch Didak 101 the preverbal machine that taught spelling Alternate names proposed by Skinner include Autodidak Instructomat and Autostructor Telling these somewhat cautionary tales Watters challenges what she calls the teleology of ed tech the idea that not only is computerized education inevitable but technological progress is the sole driver of events **OE [publication]** ,1968

Conversational Forms of

Instruction and Message Layer Design Andrew S. Gibbons,Elizabeth Boling,2021-09-30 This book examines the

theoretical basis of one of the functional layers the message layer of an architectural theory of instructional design The architectural theory Gibbons 2003 Gibbons Gibbons 2014 identifies seven functions carried out during instruction that correspond with designable strata or layers The architectural theory proposes that for each layer there exists a specialized body of design languages constructs questions tools practices processes a professional community and most especially bodies of design theory It also proposes that design knowledge from other design fields many of which approach design from the same functional perspective can be appropriated for the further development of knowledge within the instructional technology field A robust literature from disparate fields supplies relevant theory for message layer design This book builds the case for validation of the message layer by bringing together work from instructional theory conversation theory research in the learning sciences intelligent tutoring system research and K 12 education Within this literature the authors demonstrate the existence of the message as a structural abstraction an independently designable entity They trace the development of the message construct historically showing that it has remained remarkably stable over time independent of changing psychological educational and technological conventions

De Souza, Darlene E. Crone-Todd, 2024-03-12. This cutting edge timely book is a primary resource for students faculty coordinators and supervisors in the growing field of behavior analysis. This book acts as a single resource that pulls together the background current status and future directions related to the relevance of a behavior analytic approach to teaching assessment and supervision. The authors collaborating in this volume are experts at various stages of career development and have a known presence in the field. This combination of theory driven and high caliber authors have collaborated to create a one of a kind book drawing from backgrounds of diversity in terms of gender areas of expertise and geography. The recent pandemic has resulted in a pivot to remote learning and online supervision this text will provide an important contribution in terms of understanding how to provide high quality teaching supervision and assessment in behavior analysis and among other areas. As the field is moving to increasing standards for programs that correspond to accreditation body standards this book also provides timely information about how to prepare for this process including cultural competency and ethics which guide our teaching and practice.

Evidence-Based Educational Methods Daniel J. Moran, Richard W. Malott, 2004-06-29. Evidence Based Educational Methods answers the challenge of the No Child Left Behind Act of 2001 by promoting evidence based educational methods designed to improve student learning. Behavioral scientists have been refining these instructional methods for decades before the current call for evidence based education. Precision Teaching Direct Instruction Computerized Teaching Personalized System of Instruction and other unique applications of behavior analysis are all informed by the scientific principles of learning. These have been tested in the laboratory and are often shown to have significant success in field applications. This book details each of these approaches to education based on the principles of behavior analysis. Individuals and agencies responsible for instruction that leaves no child behind will find this compendium an important resource for meeting that challenge and young educators will greatly benefit from this text as they will see a blueprint of the evidence based education systems being planned for the future. The education literature is replete with fly by night ideas and unresearched opinions about how to teach children. This book has none of that. The reader is given researched educational methods. In fact some methods draw on 3 or 4 decades of experimental data. The whole book is cohesive not just a patchwork of different educators opinions. All of the chapters are built on basic scientific principles of behavior and all of the methods can be used with one another. This is a book by scientist practitioners but not for scientists only. A parent can read many of these chapters see the merit in the methods and convey the need and the process for each of the methods. No book stands alone but is connected to a greater literature base. The reader is shown where other information can be found about these methods. The only thing better than scientific data is scientific data supported by consumer testimonial. Chang,H.F.M Crombag,K.D.J.M. van der Drift,J.F. Moonen,2012-12-06 History The present book is a translation and in part an adaptation of a study the authors conducted for the Dutch Ministry of Education Several years ago the Dutch authorities decided to found an Open University a system of distance learning especially suited to students only able or willing to devote part of their time to their studies and moreover not generally capable of studying at fixed times or places A preparatory committee was created which published a preliminary report in 1978 This report was largely concerned with the kinds of courses the Open University should offer and the kinds of students it planned to enroll The report also discussed possible teaching methods or media of the Open University The predominant conclusion was that written instruction should constitute the basic teaching medium and that other media e g computerized instruction or televi sion were only to be added if the written medium failed to realize the desired teaching objectives This preference was mainly based on considerations of cost since the committee expected written instruction to be the cheapest alternative possible Whether this is in fact true will be discussed later in this book We were then asked to reconsider the different possibilities of teaching methods and media in more detail in terms of their differential teaching effects costs of application and the committee s preference for the print medium Work was started on this assignment in 1978 and completed a year later
