**Cretaceous Project 200, Volume 1: The Cretaceous World** M.B. Hart,S.J. Batenburg,B.T. Huber,G.D. Price,N. Thibault,M. Wagreich,I. Walaszczyk,2025-04-02 The Cretaceous was first mentioned in the legend of a geological map largely centred on France published in 1822 by Jean Baptiste Julien d Omalius d Halloy Two hundred years of research have demonstrated that the Cretaceous records some of the highest sea levels atmospheric temperatures and extreme events in Earth history It was also a time of significant palaeogeographical changes and continental fragmentation This volume draws together a collection of papers that demonstrate these particularly Cretaceous events of warm climates sea level change and the impact of major volcanic events on the fauna and flora of the time Geochemical and stable isotope data are used to interpret these changing environments and their impact on the Cretaceous ecosystem The volume closes with a description of the recent drilling of the Chicxulub bolide impact site

*A New History of Life* Peter Ward,Joe Kirschvink,2015-01-01 Charles Darwin s theories first published more than 150 years ago still set the paradigm of how we understand the evolution of life but scientific advances of recent decades have radically altered that Now two pioneering scientists draw on their years of experience in paleontology biology chemistry and astrobiology to deliver an eye opening narrative using a generation s worth of insights culled from new research Writing with zest humor and clarity Ward and Kirschvink show that many of our long held beliefs about the history of life are wrong Three central themes emerge First Ward and Kirschvink argue that catastrophe shaped life s history more than all other forces combined from notorious events like the sudden extinction of dinosaurs to the recently discovered Snowball Earth and the Great Oxygenation Event Second life consists of carbon but oxygen carbon dioxide and hydrogen sulfide determined how it evolved Third ever since Darwin we have thought of evolution in terms of species Yet it is the evolution of ecosystems from deep ocean vents to rainforests that has formed the living world as we know it Ward and Kirschvink tell a story of life on Earth that is at once fabulous and familiar And in a provocative coda they assemble discoveries from the latest cutting edge research to imagine how the history of life might unfold deep into the future

Lamarck's Revenge Peter Ward,2018-08-14 A riveting explanation of epigenetics offering startling insights into our inheritable traits In the 1700s Jean Baptiste Lamarck first described epigenetics to explain the inheritance of acquired characteristics however his theory was supplanted in the 1800s by Darwin s theory of evolution by natural selection through heritable genetic mutations But natural selection could not adequately explain how rapidly species re diversified and repopulated after mass extinctions Now advances in the study of DNA and RNA have resurrected epigenetics which can create radical physical and physiological changes in subsequent generations by the simple addition of a single small molecule thus passing along a propensity for molecules to attach in the same places in the next generation Epigenetics is a complex

process but paleontologist and astrobiologist Peter Ward breaks it down for general readers using the epigenetic paradigm to reexamine how the history of our species from deep time to the outbreak of the Black Plague and into the present has left its mark on our physiology behavior and intelligence Most alarming are chapters about epigenetic changes we are undergoing now triggered by toxins environmental pollutants famine poor nutrition and overexposure to violence Lamarck s Revenge is an eye opening and provocative exploration of how traits are inherited and how outside influences drive what we pass along to our progeny

**Origins** Frank H. T. Rhodes, 2016-07-29 Fossils are the fragments from which piece by laborious piece the great mosaic of the history of life has been constructed Here and there we can supplement these meager scraps by the use of biochemical markers or geochemical signatures that add useful information but even with such additional help our reconstructions and our models of descent are often tentative For the fossil record is as we have seen as biased as it is incomplete But fragmentary selective and biased though it is the fossil record with all its imperfections is still a treasure Though whole chapters are missing many pages lost and the earliest pages so damaged as to be as yet virtually unreadable this the greatest biography of all is one in whose closing pages we find ourselves from Origins In Origins Frank H T Rhodes explores the origin and evolution of living things the changing environments in which they have developed and the challenges we now face on an increasingly crowded and polluted planet Rhodes argues that the future well being of our burgeoning population depends in no small part on our understanding of life s past its long and slow development and its intricate interdependencies Rhodes s accessible and extensively illustrated treatment of the origins narrative describes the nature of the search for prehistoric life the significance of geologic time the origin of life the emergence and spread of flora and fauna the evolution of primates and the emergence of modern humans
